Institutional Mission, Goals and Objectives

Martinsburg College (MC) seeks to provide high quality, relevant and affordable, distance learning programs to individuals who want to improve their personal and professional development and career growth opportunities.

The institutional goals are:

- Maintain high quality, relevant, educational programs for which there is a demand
- Continuously improve the quality of educational services and student outcomes

The institutional objectives are:

- Maintain high levels of student satisfaction
- Maintain high completion rates
- Achieve budgeted goals and maintain financial growth and stability

Key Administrators

Paul Viboch, President

Stella Garlick, Vice-President, Administration Rita

Claypole, Vice-President, Academic Affairs Jon

McFry, Vice-President, Compliance

Alyssa Bueno, Vice-President, Operations

Lacey Casey, Vice-President of Enrollment Management

Nancy Amos, Director of Curriculum Development

Legal Control

Martinsburg College is a privately held corporation. Paul Viboch, President, holds the majority of voting shares of the corporation.

INTRODUCTION

Welcome to Martinsburg College

Investing in education is a serious decision. When you explore training options, you are, in effect, investing in yourself. Martinsburg College provides skills- based educational programs to adults seeking to achieve improved levels of proficiency in a range of disciplines. At Martinsburg College, we encourage a student population of responsible adults because we know that they are the best learners.

History

Martinsburg College's history of providing education to adults dates back to 1980 when the first training center was opened in New York and has been based in Martinsburg, WV since 2006.

Student centered education was first introduced in our brick and mortar school in 1980. As educational technology improved, Martinsburg College was able to transfer decades of in-school experience to distance education programs. Currently, all of Martinsburg College's programs utilize distance education delivery.

Accreditation and Licensure

Martinsburg College is accredited by the Distance Education Accreditation Commission (DEAC). F o u n d e d i n 19 2 6, DEAC is listed by the United States Department of Education as a nationally recognized accrediting agency. DETC is also a recognized member of the Council for Higher Education Accreditation (CHEA).

Distance Education Accreditation Commission
1101 17th Street, N.W., Suite 808
Washington, D.C. 20036

(202) 234-5100

The College has received a permit to operate from the West Virginia Council for Community and Technical College Education.

Admissions

Martinsburg College is committed to the success of all its students. Consequently, it is important that students have no limitations that would interfere with the successful completion of training. In order to successfully complete programs, students must be able to physically use a computer, including using the keyboard and mouse. Students must be able to view a computer screen and read information on the screen. Courses include audio-based materials in which students are required to listen to presentations and submit assignments and/or complete quizzes and tests based on the presentations. In these cases, students would need to be able to hear presentations either through headphones or computer speakers. If you believe you have any limitations that may impinge upon your success as a student, please discuss them with an admissions representative prior to enrolling in a course/program.

Students have access to the online classroom and electronic reference library 24/7.

All students are required to complete and submit an Enrollment Agreement which outlines the terms of the enrollment and financial obligations for the course/program.

Admissions Requirements

Certificate Programs

For certificate-level programs, students complete an admissions interview to determine if the institution has educational programs that will meet their needs. In addition, the following certificate programs require students to have earned a high school diploma or equivalent: Business Administration, Human Resources, Project Management, Medical Office Administration, Medical Billing and Coding, Pharmacy Technician, Introduction to Medical Assisting, Medical Assisting, Homeland Security, Computer Support Technology, and Cybersecurity.

Associate Degree Programs

For the associate degree programs, students also complete an admissions interview and must have earned a high school diploma or equivalent.

Graduate Certificate in Applied Behavior Analysis

Students must have earned a minimum of a bachelor's degree program.

International Students

Prospective students whose native language is not English and who have not earned a degree from an appropriately accredited institution where English is the principal language of instruction must demonstrate college-level proficiency in English through one of the following for admission:

Undergraduate Degree:

1. A minimum score of 500 on the paper-based Test of English as a Foreign Language (TOEFL PBT), or 61 on the Internet Based Test (iBT), or a 6.0 on the International English Language Test (IELTS), or 44 on the Pearson Test of English Academic Score Report or have earned a high school diploma completed at an accredited/recognized high school (where the medium of instruction is English).

2. A minimum score on the College Board Accuplacer ESL Exam Series as follows:

ESL Language Use: Score of 85

ESL Listening: Score of 80

ESL Reading: Score of 85

ESL Sentence Meaning: Score of 90

ESL Writeplacer: Score of 4

Comprehensive Score for all exams of 350

A minimum grade of Pre-1 on the Eiken English Proficiency Exam;

A minimum B-2 English proficiency level identified within the Common European Framework of Reference (CEFR) standards and assessed through various ESOL examinations, including the University of Cambridge;

A transcript indicating completion of at least 30 semester credit hours with an average grade of “C” or higher at an institution accredited by an agency recognized by the United States Secretary of Education and/or the Council for Higher Education Accreditation (CHEA), or accepted foreign equivalent that is listed in the International Handbook of Universities where the language of instruction was English.

Prospective students who wish to submit transcripts that are not in English must have their transcripts evaluated by an appropriate third party and translated into English. Once the foreign transcripts have been evaluated, the report must be sent directly to the institution for review. Based on the information provided, a determination is made as to whether the individual meets the admissions requirements.

Prospective students seeking foreign transcription evaluation may choose to use the services of IERF or a transcript evaluation service that is a member of the National Association of Credential Evaluation Services (NACES).

The following organizations are approved by the institution: Foreign Transcript Evaluation (<http://www.ierf.org/>)
List of Approved Evaluators (<http://www.naces.org/members.htm>)

Martinsburg College is committed to the success of all its students. Consequently, it is important that students have no limitations that would interfere with the successful completion of training. In order to successfully complete programs, students must be able to physically use a computer, including using the keyboard and mouse. Students must be able to view a computer screen and read information on the screen. Some courses include audio-based materials in which students are required to listen to presentations and submit assignments based on the presentations. In these cases, students would need to be able to hear presentations either through headphones or computer speakers. If you believe you have any limitations that may impinge upon your success as a student, please discuss them with an admissions representative prior to enrolling in a course/program.

Denial/Conditional Probation Admission Decision and Appeal

Martinsburg College reserves the right to deny admission to applicants who do not meet admissions requirements, do not complete the admissions process, do not submit requested documentation, and/or who display inappropriate behavior during the admissions process. Applicants may be admitted conditionally, in a probationary status and the enrollment may be limited in order to demonstrate their ability to successfully complete college-level coursework. Factors considered in admission decisions may include, but are not limited to, high school GPA, past academic performance at other post-secondary institutions, excessive course withdrawals, and other indicators of success.

Applicants who wish to appeal the admission decision have the right to do so by providing additional information to support their application to:

lcharbonnier@martinsburgcollege.edu

Hours of Operation

Martinsburg College's administrative offices are open from Monday – Thursday 8:30am – 8:30pm and Friday 8:30 am – 5:30pm (EST). If, for any reason, students are unable to speak with administrative staff during these times, other appointment times may be arranged in advance by contacting the Student Services Department at (304) 263-6262 ext. 2.

Instructional and student services support is available from 8:30am – 11:00pm (EST)

Mondays – Thursdays and from 8:30am – 6:00pm(EST) on Friday and from 11:00am – 6:00pm (EST) on Saturday.

Technology Requirements

General Requirements:

High Speed Internet access

PC Requirements:

Operating System: 32-bit and 64-bit Versions of Windows 7 SP1, Windows 8, and Windows 10

CPU Processor: 1.86Ghz Intel Core 2 Duo or greater

RAM: highest recommended for the operating system or 2GB

Hard Drive: highest recommended for the operating system or at least 1GB of available space.

Screen Resolution must be 1024×768 or higher.

Adobe Reader (Version 9, 11, or DC) is required for viewing PDF documents. Browser:

Internet Explorer 11, Edge 16+, Chrome v67+, or Firefox v60.x+

MAC Requirements:

Operating System: Mac OS® X™ v10.12 or higher

CPU: Intel processor

RAM: 2GB

Hard Drive: 1GB or higher available space Screen

Resolution must be 1024×768 or higher.

Adobe Reader (Version 9, 11, or DC) is required for viewing PDF documents. Latest version of Safari v10.1+, Chrome v67+, or Firefox v60.x+

Android Requirements:

Operating System: Android 6.0+
Screen Resolution must be 1024x768 or higher. Adobe Reader downloaded from the App Store. Browser: Mobile Chrome.

iOS Requirements:

Operating System: iOS 11+
Screen Resolution must be 1024x768 or higher. Adobe Reader downloaded from the App Store. Browser: Mobile Safari, Chrome v67+.

Academic Calendar

Holiday Schedule

The school is open year-round with the exception of the following holidays:

2023 Holidays

Date	Holiday Observed
January 1, 2023	New Year's Day
February 20, 2023	President's Day
May 29, 2022	Memorial Day
July 4, 2022	Independence Day
September 4, 2022	Labor Day
November 11, 2022	Veteran's Day
November 23, 2022	Thanksgiving Day
December 25, 2022	Christmas Day

Orientation

Students are required to complete an orientation prior to beginning their program. The orientation covers a detailed review of the program including instructional materials, online resources, learning management system, the requirements for successfully completing the program, the process for submitting coursework, how to contact the student services department and other frequently asked questions.

Graduation Requirements

In order to graduate from a certificate program, students must complete all credits in the program and earn a minimum GPA of 2.0.

In order to graduate from an associate degree program, student must complete all credits in the program, including any required courses, and earn a minimum GPA of 2.0. Please see specific degree program information for specific requirements.

Certificate Programs

Martinsburg College offers certificate programs in the following areas:*

Business & Professional Development
Business Administration
Human Resources
Project Management

Information Technology/Security
Computer Support Technology
Principles of Cybersecurity
Homeland Security

Healthcare Administration
Medical Office Administration Healthcare
Administrative Specialist
Medical Billing and Coding
Introduction to Medical Assisting
Medical Assisting
Pharmacy Technician

**Please note not all programs are offered on a continuous basis. Please check with the admissions department to determine if a program is currently being offered.*

Degree Programs

Martinsburg College offers three associate degree programs:
Associate of Science in Business Administration
Associate of Science in Integrated Technologies
Associate of Science in Healthcare Administration

Graduate- Level Programs

Graduate Certificate in Applied Behavior Analysis

Tuition Rates effective July 2023

Associate Degrees:	\$308.12 per credit hour
Certificate Programs:	
Business Administration:	\$308.11 per credit hour
Human Resources:	\$308.11 per credit hour

Military Students

U.S. active duty servicemembers, National Guard members, and Veterans are eligible for a tuition rate of \$250 per credit hour for associate degree programs and certificate programs up to 18 credits in length.

Martinsburg College does not charge an application fee or any fees for transfer credit evaluation, library access, or graduation. The Graduate Certificate in Applied Behavior Analysis program has a \$300 technology fee.

Proctored Exam Fee: Martinsburg College has partnered with ProctorU/Meazure Learning to offer online proctoring. There is no proctoring fee for students when the proctored exam is scheduled with at least 72 hours' notice.

There is a \$25.00 fee if the exam is scheduled within 24 – 48 hours' notice.

The college provides access to electronic textbooks and resources to students at no cost. For students who wish to purchase or rent a hard copy textbook, please refer to the Textbook Information here: <https://martinsburgcollege.edu/consumer-information/textbook-information/>

Please see the Cancellation and Refund Policy for information on the non-refundable portion of tuition for students who withdraw from the institution.

Due to the amount of information available for students interested in tuition funding options, the following information is available on the college's website:

Please refer to the website at www.martinsburgcollege.edu and the following link for detailed information on funding available and the process to apply for funding: <http://martinsburgcollege.edu/enroll-now/financial-assistance/>

Martinsburg College is eligible to participate in the federal student financial aid programs (Title IV). The following programs are eligible for Federal Student Financial Aid:

- A.S. in Business Administration
- A.S. in Healthcare Administration
- A.S. in in Integrated Technologies

Certificate Programs:

- Business Administration
- Human Resources
- Project Management
- Computer Support Technology
- Principles of Cybersecurity
- Homeland Security
- Medical Office Administration
- Medical Billing and Coding
- Introduction to Clinical Medical Assisting
- Medical Assisting
- Pharmacy Technician
- Graduate Certificate in Applied Behavior

For the Financial Student Assistance Title IV programs disclosures, please click this link <http://martinsburgcollege.edu/consumer-information/>

The following information applies to California-based students:

The State of California established the Student Tuition Recovery Fund (STRF) to relieve or mitigate economic loss suffered by a student in an educational program at a qualifying institution, who is or was a California resident while enrolled, or was enrolled in a residency program, if the student enrolled in the institution, prepaid tuition, and suffered an economic loss. Unless relieved of the obligation to do so, you must pay the state-imposed assessment for the STRF, or it must be paid on your behalf, if you are a student in an educational program, who is a California resident, or are enrolled in a residency program, and prepay all or part of your tuition.

You are not eligible for protection from the STRF and you are not required to pay the STRF assessment, if you are not a California resident, or are not enrolled in a residency program.

It is important that you keep copies of your enrollment agreement, financial aid documents, receipts, or any other information that documents the amount paid to the school. Questions regarding the STRF may be directed to the Bureau for Private Postsecondary Education, 1747 North Market, Suite 225, Sacramento, CA 95834. Telephone (916) 574-8900 or (888) 370-7589.

To be eligible for STRF, you must be a California resident or are enrolled in a residency program, prepaid tuition, paid or deemed to have paid the STRF assessment, and suffered an economic loss as a result of any of the following:

1. The institution, a location of the institution, or an educational program offered by the institution was closed or discontinued, and you did not choose to participate in a teach-out plan approved by the Bureau or did not complete a chosen teach-out plan approved by the Bureau.
2. You were enrolled at an institution or a location of the institution within the 120-day period before the closure of the institution or location of the institution, or were enrolled in an educational program within the 120 day period before the program was discontinued.
3. You were enrolled at an institution or a location of the institution more than 120 days before the closure of the institution or location of the institution, in an educational program offered by the institution as to which the Bureau determined there was a significant decline in the quality or value of the program more than 120 days before closure.
4. The institution has been ordered to pay a refund by the Bureau but has failed to do so.
5. The institution has failed to pay or reimburse loan proceeds under a federal student loan program as required by law or has failed to pay or reimburse proceeds received by the institution in excess of tuition and other costs.
6. You have been awarded restitution, a refund, or other monetary award by an arbitrator or court, based on a violation of this chapter by an institution or

- representative of an institution, but have been unable to collect the award from the institution.
7. You sought legal counsel that resulted in the cancellation of one or more of your student loans and have an invoice for services rendered and evidence of the cancellation of the student loan or loans.

To qualify for STRF reimbursement, the application must be received within four years from the date of the action or event that made the student eligible for recovery from STRF.

A student whose loan is revived by a loan holder or debt collector after a period of noncollection may, at any time, file a written application for recovery from STRF for the debt that would have otherwise been eligible for recovery. If it has been more than four (4) years since the action or event that made the student eligible, the student must have filed a written application for recovery within the original four (4) year period, unless the period has been extended by another act of law.

However, no claim can be paid to any student without a social security number or a taxpayer identification number.

GENERAL INFORMATION

Student Services

Martinsburg College provides a variety of support services to students. Instructional and technical support is available six days a week via telephone or electronically.

Administrative support is available via our administrative offices from 8:30am to 8:00pm (EST) Monday – Thursday and 8:30am – 5:30pm on Friday (EST) via telephone, email, or online chat. Student Services’ staff monitors each student’s progress and proactively communicates with students both through e-mail and telephone contact. They will provide additional support and/or referrals when appropriate. Students should contact the Student Services department with any change in their contact information as soon as possible.

Library Services

Martinsburg College’s students have access to an extensive electronic Reference library. This resource provides access digitally to a wide range of reference material provided by established publishers and authors. Navigation and searches within this resource are user-friendly allowing students to access information quickly and easily. This resource is available to students at any time. You may access required texts for your courses via the e-Reference Library. Please see the individual syllabus for your course for information. Detailed information on how to access the e-Reference Library is covered in the Orientation and the Study Instructions Guide.

MARTINSBURG COLLEGE’S PROGRAMS

Degree Programs

Associate of Science in Business Administration

Program Length: 60 Semester Credit Hours

Program Overview:

In this program, students will learn foundational skills essential to any business environment in the areas of business office administration, communications, software applications, and business professionalism. Students then choose elective courses to build on the foundational skills and gain specific knowledge and skills in additional business areas including foundational accounting concepts, marketing, human resources, and project management.

Program Outcomes:

Upon completion of the core courses within the program, students are expected to be able to:

- Utilize industry standard business applications software.
- Demonstrate the ability to communicate effectively.
- Demonstrate ways to conduct oneself professionally in a business environment.
- Describe the importance of business ethics and corporate social responsibility

Additional Program Outcomes based on electives chosen:

- Demonstrate knowledge of employment laws
- Apply industry standard accounting principles
- Understand the principles of the project management framework
- Demonstrate an understanding of the key concepts of marketing

Listed below are summaries of each course available within the program.

Core Requirements (5 courses – 15 Semester Credit Hours)

BUS150 Introduction to Business 3 Credits

In this course, students will examine the foundations of business including the various functions, roles, and characteristics of business, in addition to business ownership and entrepreneurship.

The course introduces the business environment including organizational structure, the economic environment, and the use of technology to manage business information. Students will explore the importance of human resources management and teamwork. Students are familiarized with the financial markets and role of accounting and finance in business. Students are also introduced to business marketing, business within the global environment, and business ethics and corporate social responsibility.

CIS103 Introduction to Operating Systems and Software Applications 3 Credits

This course introduces students to the basics of operating systems, including user interfaces, settings, applications, and security features. Students will learn the basics of Microsoft Office business applications including Word, Excel, PowerPoint, and OneDrive as well as the basics of Google Apps including Google Docs, Google Sheets, Google Slides, Google Sites, Gmail, and Google+. Collaboration, sharing, and security options are covered for software application suites. The course covers essential computer security topics including the use of anti-malware applications, safe web browsing habits, corporate policies regarding computer safety, and password strength.

CIS101 Business Software Applications I 3 Credits

This course is designed to teach students the basic skills necessary to work with common business software applications used in business today. Students will learn to create and edit documents using word processing software, enter and edit data into workbooks and spreadsheets, and create, format, and present information using presentation software.

BUS105 Business Professionalism 3 Credits

This course will focus on the importance of developing a reputation of professionalism both inside and outside of the work setting. This course covers the importance of goal setting and time management as it relates to increasing productivity and achieving a healthy work/life balance, what it means to be an accountable professional and how to build and cultivate relationships among colleagues and peers.

BUS111 Business Office Administration Skills 3 Credits

The study of office procedures is no longer solely for the student who seeks employment as office support staff after graduation. With the extensive introduction of technological innovations, many workers now perform office tasks. Regardless of your job and career aspirations, you need basic office competencies if you are to carry through your responsibilities with effectiveness and efficiency.

General Education Requirements (5 courses – 15 Semester Credit Hours)

CIS102 Introduction to Computer Technologies 3 Credits

This course will provide students with an introduction to information technology. The course is designed to create a foundational knowledge in information technology (IT). It is ideal for those considering a career in IT, technology support, or for those who wish to work in allied health fields that require a broad understanding of IT.

COM101 Communications 3 Credits

This course will provide students with the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

PSY101 Introduction to Psychology 3 Credits

This course provides a general overview of psychology including topics such as perception, communication, learning, memory, decision-making, life-span development, and persuasion. Students will become acquainted with many of the important findings and theoretical approaches in the field.

GOV201 American Government 3 Credits

In this course, students will explore the American government. Students will discover how the system of government was established based upon the ideals of liberty, equality, and justice. The course details how the government is structured and how it operates. Students will delve into the rights and liberties granted by the Constitution for the people.

MATH103 General Math 3 Credits

This course will provide students with the tools necessary to review basic mathematical arithmetic including whole numbers, fractions, decimals, percentages, ratios, rates, proportions, geometry, measurement, basic statistics, and signed numbers. Students will gain knowledge of these mathematical concepts using real-world scenarios.

Elective Option Requirements (students must choose 10 courses – 30 Semester Credit Hours)

PM131 Project Management Framework Essentials & Business Domain 3 Credits

This course provides the student with an understanding of the principles of the project management framework and the project management business environment domain in alignment with standards accepted by the Project Management Institute (PMI®).

The project management framework consists of the processes, tasks, and tools used to take a project from start to finish. It encompasses the key components required for:

- Planning
- Managing
- Governing projects

The project management business environment domain consists of high-level knowledge that is essential to the practice of project management applying to:

- Planning and managing project compliance
- Evaluating and delivering project benefits and value
- Evaluating and addressing external business environmental changes for impact on scope, and supporting organizational change

The course will identify key project management concepts and terms and provide information about the variables that can influence project outcomes, influence of project stakeholders, organizational influences on a project, and how organizations evaluate which projects to pursue and monitor and track project value.

PM132 Project Management People Domain 3 Credits

This course provides the student with an understanding of the principles of the project management people domain in alignment with standards accepted by the Project Management Institute (PMI®).

The project management people domain consists of the soft skills required to successfully manage projects. These skills include processes, tasks, and tools embedded in the project communications management, project stakeholder management, and project resource management knowledge areas that are employed to:

- Lead project teams
- Create and develop teams
- Lead project teams in an Agile/Adaptive project life cycle
- Manage project resources
- Communicate effectively as a project manager in Traditional/Predictive project life cycles
- Effectively engage with team members and other project stakeholders as a project manager in Traditional/Predictive project life cycles
- Effectively engage and communicate with team members and other project stakeholders as a project manager in Adaptive/Agile project life cycles

PM133 Project Management Process Domain I 3 Credits

The project management process domain consists of the technical skills required to successfully manage projects. This course addresses the processes, tasks, and tools embedded in the project integration management, and project scope management knowledge areas that are employed to:

- Understand the ongoing interactions between project management knowledge area processes during project Initiation, Planning, Execution, Monitoring and Controlling, and Closing
- Integrate accepted change requests into the project management plan
- Document project activities
- Manage the project through its phases
- Communicate project deliverables to project stakeholders effectively as a Project

- Manage and control project risk
- Implement project procurement strategies
- Perform vendor selection
- Manage and control selected vendors

MATH101 Business Math 3 Credits

This course will provide students with the tools necessary to review basic mathematical arithmetic including whole numbers, fractions, decimals, percentages, ratios, rates, proportions, geometry, measurement, basic statistics, and signed numbers. Students will gain knowledge of these mathematical concepts through business workplace scenarios.

ACT102 Bookkeeping Fundamentals 3 Credits

This course provides a basic introduction to accounting terms and concepts and why they are important to understand. Students will learn how these concepts are applied in everyday business situations through completion of related accounting exercises and problems. Students will also learn how to create financial statements and develop an understanding of the importance of the information they give about a company.

ACT105 Computerized Bookkeeping 3 Credits

This course is an introduction to computerized bookkeeping. Using QuickBooks Online, students will learn how to navigate and use this software application. This course covers setting up a new company, customizing the chart of accounts, and working with the products and services lists. Sales and invoicing customers, purchases, entering bills, and expenses from vendors, and staying on top of the accounts receivable and accounts payable balances are covered in detail. Giving other users, such as accountants, access to data is also covered.

BUS205 Business Marketing 3 Credits

This course is an introduction to marketing and its key concepts. The course examines the different marketing strategies organizations use to interact with their customers and prospective customers. Students will learn that in today's highly competitive business environment, organizations need to use a multichannel approach to marketing.

COM102 Professional Communication Skills 3 Credits

This course reviews the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students will review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

ACT101 Accounting I 3 Credits

This course will provide a basic introduction to accounting terms and concepts and why they are important for students to understand. Students will see how these concepts are applied in everyday business situations through completion of related accounting exercises and problems. The course will cover financial statements and the information they give about a company.

CIS201 Business Software Applications II 3 Credits

discusses various strategies for customer relationship management. Students will learn business communication skills as well as strategies to manage conflicts and stressful situations.

CIS102 Introduction to Computer Technologies 3 credits

This course will provide students with an introduction to information technology. The course is designed to create a foundational knowledge in information technology (IT). It is ideal for those considering a career in IT, technology support, or for those who wish to work in allied health fields that require a broad understanding of IT.

MATH103 General Math 3 credits

This course will provide students with the tools necessary to review basic mathematical arithmetic including whole numbers, fractions, decimals, percentages, ratios, rates, proportions, geometry, measurement, basic statistics, and signed numbers. Students will gain knowledge of these mathematical concepts using real-world scenarios.

PSY101 Introduction to Psychology 3 credits

This course provides a general overview of psychology including topics such as perception, communication, learning, memory, decision-making, life-span development, and persuasion. Students will become acquainted with many of the important findings and theoretical approaches in the field.

GOV201 American Government 3 credits

In this course, students will explore the American government. Students will discover how the system of government was established based upon the ideals of liberty, equality, and justice. The course details how the government is structured and how it operates. Students will delve into the rights and liberties granted by the Constitution for the people.

COM101 Communications 3 credits

This course will provide students with the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

MATH101 Business Math 3 credits

This course will review basic mathematical concepts and provide students with the tools necessary to apply these concepts to the business environment. Students will focus on applying mathematical concepts to real-world business scenarios.

MATH102 Technical Mathematics 3 credits

The Technical Mathematics course provides students with mathematical skills they will require in their day-to-day functions as technology professionals. The course includes topics on number systems, algebra, analytic geometry, and fundamental trigonometry. The course uses examples and problems that students will encounter and will be expected to solve on the job.

COM102 Professional Communication Skills 3 credits

This course reviews the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students will review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

CIS101 Business Software Applications I 3 credits

This course is designed to teach students the basic skills necessary to work with common business software applications used in business today. Students will learn to create and edit documents using word processing software, enter and edit data into workbooks and spreadsheets, and create, format, and present information using presentation software.

CIS209 Cloud Computing 3 credits

This course explores the evolution and definition of cloud computing and cloud services. It provides a look at the key characteristics that make cloud services unique and very valuable to some business scenarios. The course provides a review of, and builds upon, the concepts and strategies emerging from the cloud and aims to provide the background needed to determine if and how cloud products and services can improve traditional business processes.

CIS250 Network Security 3 credits

This course will equip students with knowledge in cyber security concepts necessary for securing network infrastructure across cloud-based and other services. Topics in this course include Microsoft services such as Azure and 365; important compliance considerations; network analysis and monitoring; and the use of predictive analytics for maintaining cyber security and identifying network attacks.

CIS140 Security Fundamentals I 3 credits

The Security Fundamentals I course introduces the fundamentals of network security. The course covers how to secure networks and mitigate security threats. Students will learn how to perform risk assessments and security audits on a network. Students will learn attack and defense strategies, access control and identity management, cryptography, policies, procedures and awareness, and physical security.

CIS106 Cloud Computing Fundamentals 3 credits

In this course, students will gain a solid foundation in cloud computing fundamentals, including understanding use cases, types, characteristics, deployment models, benefits, challenges, and risks. The course compares major cloud providers, analyzes trends, explores monitoring tools, and identifies key factors for selecting a cloud platform. Students will evaluate essential aspects of cloud networking, security, load balancing, storage, high availability, transformation planning, and apply effective cloud security practices.

ELEC101 Electrical and Electronic Fundamentals 3 credits

The Electrical and Electronic Fundamentals course focuses on the basic concepts and skills that students will require when they work with electrical equipment in a residential location. The course discusses the fundamental principles of electricity and electronics and the function of various devices, such as resistors, capacitors, amplifiers, and oscillators. Different types of circuits and their applications are also discussed. Students will use

electrical test equipment and diagnostic tools. Students will learn to apply safety measures, codes, rules, and regulations that must be followed for preventing mishaps.

Associate of Science in Healthcare Administration

Program Length: 60 Semester Credit Hours

Program Overview:

This program is designed to provide students with the administrative skills needed to function in today's modern health care environment. This includes understanding associated terminology, health records management, communication, privacy, law and ethics. The program has a common core and then offers students electives and professional concentration options. The professional concentrations allow students to choose from medical records, billing and coding, clinical medical assisting, or pharmacy practice. The degree is awarded to students after earning 60 semester credits.

Core:

Students must complete 21 credits in core studies. After completing the core courses, students are expected to be able to:

- Name and describe the structure and function of the various body systems and identify the pathophysiologic conditions and disorders, diagnostic procedures, and treatment options for each.
- Accurately and professionally perform the duties of a medical office professional.
- Explain federal and state laws and regulations that affect the health care industry.

Depending on the elective courses chosen, students are expected to be able to:

Medical Office Administration

- Compile and maintain patient's electronic medical records, and ensure completeness, accuracy, security, confidentiality, and compliance with regulations.
- Describe the processes, procedures, and terms related to the medical billing cycle.
- Communicate effectively and professionally both verbally and in writing.
- Perform administrative functions relating to the medical environment.
- Demonstrate professionalism in every aspect of their role as a medical office professional.
- Protect the security of patient records to ensure that confidentiality is maintained.

Medical Assisting

- List and discuss best practices for preparing, administering, and documenting medications and immunizations following the six rights of medication administration.
- Identify best practices for safety and infection control in a medical office.
- Describe the role of the medical assistant in preparing the patient for and assisting with patient examinations, surgical, and lab procedures commonly performed in a physician's office.

Medical Records, Billing and Coding

- Accurately translate reports from healthcare providers into appropriate medical codes using ICD-10, CPT, and HCPCS code sets and enter the codes into a form and/or software.
- Create and submit accurate claims, create patient bills, and apply industry-standard payment methodologies.

Pharmacy Practice

- Identify the knowledge, skills, and job responsibilities of a pharmacy technician.
- Use standard pharmacy reference sources.
- Identify the top 200 drugs and list their uses and side effects.
- Carry out dosage calculations.
- Identify the information contained on medication orders, prescriptions, and drug labels.

Please see below for summaries of each course within the Associate of Science in Health Care Administration.

MED101 Medical Terminology 3 credits

This course introduces students to the language of medicine. Students will gain an understanding of the way medical terms are formed and how to build medical terms using combining forms, prefixes, and suffixes. Students will learn the structure and function of various body systems and about the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED135 Medical Office Procedures 3 credits

Throughout this course, students will gain an understanding of the duties and responsibilities of the medical assistant with a focus on the administrative function. This includes learning about their role as part of a healthcare team and the various environments in which they may seek employment, the importance of professionalism and ways to build and improve their professional skills, the various law and legal aspects that govern the healthcare environment as well as the many ethical issues that play into their interactions and patient care.

MED103 Medical Office Communications 3 credits

In this course, students are taught the skills necessary to communicate effectively in a professional medical environment using both oral and written communication channels. Students will learn the strategies to write and deliver clear, concise messages and documents typical of the medical office that comply with HIPAA requirements. Through lessons, practice activities, and simulations, students are taught proper communication techniques including best practices for verbal and non-verbal communication, managing the telephone, and creating written correspondence.

MED104 Medical Office Administrative Skills 3 credits

In this course, students will learn the administrative duties and responsibilities typical in the medical office. These include front office procedures, appointment scheduling, office supply inventory, medical record preparation, and patient confidentiality and privacy. In addition, students will learn computer applications and software used in the medical office, the medical record and will perform electronic health record (E.H.R.) simulation activities. The course also covers the procedures for opening and closing the medical office each day and care of facilities and medical equipment.

MED111 Business Practices for the Medical Office 3 credits
In this course, students will learn how to perform business practices typical of the medical office. These include preparing insurance claims, compliance, Medicare assignment, types of healthcare reimbursement, and billing secondary insurance. Students will also learn the billing cycle, processing patient payments and posting, credit and balances, refunds, and collection procedures. The course also includes accounts payable and accounts receivable, credit card processing procedures, general financial transactions, and common banking procedures.

MED140 Anatomy and Physiology I 3 credits
This is the first of a two-course series that provides a comprehensive study of the anatomy and physiology of the human body. In this course, students will review the overall organization of the human body and will identify the anatomical locations of the various organs and systems. The course will discuss genetic and congenital disorders, and the structure and function of cells and cell division. The nervous, sensory, integumentary, muscular, and skeletal systems will be covered including the structure, function, common pathology, diagnostic procedures, and treatments. The course is designed for students who have little formal knowledge of the human body who wish to pursue a career in health-related professions.

MED141 Anatomy and Physiology II 3 credits
This course is a continuation of Anatomy and Physiology I. This course covers the respiratory, circulatory, immune, digestive, urinary, endocrine, and reproductive systems in detail including the structure and function of each system, diseases and disorders, diagnostic procedures, and treatment options.

MED105 Medical Terminology II 3 credits
This course is part 2 of a 2-part course which introduces students to the language of medicine. Students will continue to learn about the structure, function, and basic anatomy of various body systems and about the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED119 Medical Office Workplace Readiness 3 credits
In this course, students will learn the skills required to function in the medical office environment. Students will learn how to ensure compliance with Occupational Safety and Health Administration (OSHA) requirements including evacuation plans and emergency procedures. In addition, students will learn proper infection control procedures. The course includes technologies used in the healthcare environment including telehealth virtual appointments and meetings and social media literacy. In addition, the course provides students with the skills to implement a strategic career plan including networking, resume writing, interview skills, and follow up.

MED116 Business Software Applications for the Medical Office 3 credits
In this course, students learn the basic functions of MS Word to create and manage documents, such as Return to Work and Referral to Provider letters, use MS Excel for financial information and reporting as they relate to the Medical Office, and the fundamental elements of using MS Outlook to send, receive, and manage e-mail communication. The course also reviews the various mediums for communicating via social media, and the use of Internet browsers to research information.

MED115 Introduction to Medical Billing and Coding 3 credits

This course introduces the basics of medical billing and coding, as well as providing a general understanding of medical insurance and the various payers. It offers a broad overview of the revenue cycle and introduces how to successfully utilize the medical insurance claim process. This course also introduces the major code sets used in the health care industry.

MED110 Electronic Health Records 3 credits

Medical professionals who work with important patient data are required to abide by federal and state laws, as well as accreditation and regulatory agency requirements that govern the handling of patient information. As such, it is extremely important for medical professionals to remain up to date on the emerging technological trends as well as regulatory requirements. This course focuses on the health IT ecosystem with a specific focus on the role of electronic health records (EHRs).

MED142 Clinical Procedures I 4 credits

The responsibility of preparing patients for examinations and procedures performed by the providers is mainly the medical assistant. In this course, the medical assistant's role in the patient examination process will be stressed. Ensuring patient safety by minimizing disease transmission will be discussed as well as preparing a patient for specific examinations and procedures. The assistant's role of educating the patient in healthful activities and disease or disorder management is covered. The process to conduct accurate screening and the procedures to document accurately in the medical record are also reviewed.

MED143 Clinical Procedures II 4 credits

Medical assistants may be required to assist the provider in minor office surgeries and various treatment modalities, as well as provide patients with education on their treatment plan. Throughout this course students will be shown how to maintain surgical asepsis, which is vital to the prevention of disease transmission, before, during, and following any of the invasive procedures performed in the medical office or clinic. Students will also develop a good working knowledge of the care and function of basic instruments used in minor surgical procedures as well as how to assist the provider and properly prepare the patient. This course also covers several rehabilitation methods, such as body mechanics, mobility devices, and range-of-motion exercises, as well as healthy living techniques that include nutritional guidelines and the significance of diet, exercise, weight control, sleep, and the way personal behaviors influence health. Finally, this course will review what to do if confronted with an emergency or accidental situation including basic first aid skills and CPR.

MED144 Lab Procedures 3 credits

This course will provide students with an understanding of the lab procedures typical of a physician's office laboratory. Students will study various laboratory tests and procedures with a focus on safety. They will review how to recognize safety, security, and operation hazards in the medical and laboratory environment and identify best practices for eliminating and/or minimizing them. Students will also review the purpose for common diagnostic tests and identify how to differentiate between normal and abnormal results.

MED145 Medication Administration 3 credits

In this course, students will be introduced to the different classifications of medications, including indications for use, desired effects, side effects, contraindications, and adverse reactions. Students will study the common drug forms and routes of administration in addition to the required elements and purpose of a prescription and medication order. The course covers the Seven Rights of medication administration and how to apply them, how to avoid and handle medication errors, and how to calculate medication dosages.

MED146 Career Development 1 credits

This course provides students with the skills required to implement a strategic career plan. Topics include self-assessment, employability skills, career decision-making, roles and responsibilities, organizational culture, launching an employment campaign, networking, lifelong learning, and professional development. Students will practice entering various types of patient data into a simulated electronic health record (E.H.R.) system similar to those typically used in a healthcare facility. In addition, the course will provide students with the opportunity to go through practice questions in preparing for various certifications.

MED106 Medical Billing 3 credits

This course focuses on the medical billing processes providing information on medical insurance and the various payers, revenue cycle management, reimbursement methodologies, claim follow-up and payment processing, as well as the legal aspects pertaining to health insurance and claims processing. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course.

MED107 Medical Coding I 3 credits

This course is designed to impart an understanding of coding and classification systems to assign valid diagnostic and procedural codes. The course provides the comprehensive coverage needed to understand and work with medical insurance related to the application of ICD, CPT, and HCPCS codes and teaches how insurance reimbursement is directly related to proper code assignment. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course. This first course will specifically focus on ICD-10 and HCPCS codes.

MED117 Medical Coding II 3 credits

This course is designed to impart an understanding of coding and classification systems to assign valid diagnostic and procedural codes. The course provides the comprehensive coverage needed to understand and work with medical insurance related to the application of ICD, CPT, and HCPCS codes and teaches how insurance reimbursement is directly related to proper code assignment. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course. This second course will specifically focus on CPT codes.

MED108 Health Insurance Processing 3 credits

This course focuses on claim preparation and transmission, working with payers (private payers/Blue Cross and Blue Shield, Medicare, Medicaid, TRICARE and CHAMPVA, and Workers' Compensation and Disability), and compliance. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course.

MED118 Medical Coding Lab 3 credits

This course will provide students with the opportunity to practically apply all the concepts

covered throughout the program. Students will be completing online simulation exercises and assignments given various scenarios to build skills in medical billing, medical coding, and processing insurance claims in both inpatient and outpatient settings.

MED151 Introduction to Pharmacy 3 credits

This course is designed to familiarize the student with the specific knowledge and skills needed to pursue a career as a pharmacy technician. This course introduces the responsibilities of a pharmacy technician and common pharmacy practices and settings. In addition, the course will cover effective communication skills, interpersonal and time management skills, and the laws, regulations, and standards that apply to the field of pharmacy.

MED152 Pharmacology 3 credits

This course introduces the science of pharmacology, pharmacodynamics, and pharmacokinetics and will expand the students' knowledge base on a variety of drugs and interactions. Topics covered in this course include methods of drug classification, over-the-counter and prescription medications, medication dosage routes and formulations.

MED153 The Dispensing Process 3 credits

This course discusses the specific roles and responsibilities of the pharmacy technician in the prescription dispensing process. Throughout this course, students will be introduced to the various calculations, techniques, equipment, and tools used to perform sterile and non-sterile compounding as well as the operational roles in the pharmacy setting, including inventory management and business-related calculations.

MED154 Medication Safety and Quality Assurance 3 credits

This course discusses how the safety and quality of medications are ensured in the pharmacy setting as well as best practices for maintaining patient compliance. Students will develop an understanding of how and why medication errors happen, what strategies can be employed to help prevent them, and which organizations directly support medication error prevention. Additional topics covered in this course include preventing the spread of infections in the healthcare setting, safe handling of hazardous drugs, and improving patients' medication adherence.

MED155 Pharmacy Practice Areas and Employment 3 credits

This course describes various pharmacy settings and the role of the pharmacy technician within each, including the business and technical skills required and the importance of career preparation and development. This course also introduces students to the basics of medical billing and provides a general understanding of medical insurance and the various payers.

MED56 Pharmacy Technician Certification Preparation 3 credits

Professional certification is a way to measure a person's competency to complete a specific job and can set you apart from others in your field when it comes to employment opportunities. If you wish to become a certified pharmacy technician, you will need to take and pass one of two exams: the National Healthcareer Association's (NHA) ExCPT exam or the Pharmacy Technician Certification Board's (PTCB) exam, known as the PTCE. This course is a comprehensive review of the concepts you will need to know to successfully complete and pass these certifications.

MED157 Pharmacy Technician Practical Lab 3 credits

This course will provide you with hands-on lab-based learning activities which will allow you to apply the concepts you have learned throughout the Pharmacy Technician program. The activities included in this course will allow you to practice using common pharmacy lab equipment to perform procedures such as measuring liquids, using alligation calculations, counting pills, and compounding a suspension. You will also practice packaging/repackaging solid and liquid medications and documenting the process appropriately. Lastly, you will gain hands-on experience with preparing, distributing, and storing investigational drugs.

BUS105 Business Professionalism 3 credits

This course will focus on the importance of developing a reputation of professionalism both inside and outside of the work setting. This course covers the importance of goal setting and time management as it relates to increasing productivity and achieving a healthy work/life balance, what it means to be an accountable professional and how to build and cultivate relationships among colleagues and peers.

BUS111 Business Office Administration Skills 3 credits

The study of office procedures is no longer solely for the student who seeks employment as office support staff after graduation. With the extensive introduction of technological innovations, many workers now perform office tasks. Regardless of your job and career aspirations, you need basic office competencies if you are to carry out your responsibilities with effectiveness and efficiency. In this course, students will gain skills to efficiently navigate the office environment and the technology used. The financial aspects of the office setting, including banking and payroll, the production of reports, and management of processes are covered. Student will study strategies for effective time management, participating in meetings, maintaining records, and processing mail. Strategies for career planning and ongoing professional development are also discussed.

MATH101 Business Math 3 credits

This course will review basic mathematical concepts and provide students with the tools necessary to apply these concepts to the business environment. Students will focus on applying mathematical concepts to real-world business scenarios.

CIS101 Business Software Applications I 3 credits

This course is designed to teach students the basic skills necessary to work with computers and the fundamental features of the Windows operating system. In addition, students will learn how to create and edit documents using word processing software and enter and edit data into workbooks and spreadsheets.

CIS201 Business Software Applications II 3 credits

The course is designed to give students the skills to function effectively and efficiently using several software applications. Students will create and edit documents using advanced formatting features, create hyperlinks and add bookmarks, and review and repair documents. In addition, students will create effective presentations utilizing multimedia clips, sound clips, customize themes, add charts and tables, and animate objects. *Prerequisite: Completion of Business Software Applications I or equivalent knowledge.*

COM102 Professional Communication Skills 3 credits

This course reviews the skills necessary to communicate effectively in a professional

environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students will review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

CIS102 Introduction to Computer Technologies 3 credits

This course will provide students with an introduction to information technology. The course is designed to create a foundational knowledge in information technology (IT). It is ideal for those considering a career in IT, technology support, or for those who wish to work in allied health fields that require a broad understanding of IT.

COM101 Communications 3 credits

This course will provide students with the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

PSY101 Introduction to Psychology 3 credits

This course provides a general overview of psychology including topics such as perception, communication, learning, memory, decision-making, life-span development, and persuasion. Students will become acquainted with many of the important findings and theoretical approaches in the field.

GOV201 American Government 3 credits

In this course, students will explore the American government. Students will discover how the system of government was established based upon the ideals of liberty, equality, and justice. The course details how the government is structured and how it operates. Students will delve into the rights and liberties granted by the Constitution for the people.

MATH103 General Mathematics 3 credits

This course will provide students with the tools necessary to review basic mathematical arithmetic including whole numbers, fractions, decimals, percentages, ratios, rates, proportions, geometry, measurement, basic statistics, and signed numbers. Students will gain knowledge of these mathematical concepts using real-world scenarios.

Certificate Programs

Certificate programs range in length from 18 – 42 credits, unless otherwise noted. The timeframe for completion of certificate programs ranges from eight months to twenty months.

Business and Professional Development

Certificate in Business Administration

Program Length: 24 Semester Credit Hours

Program Overview:

In this program, students will learn foundational skills essential to any business environment in the areas of communication, professionalism, and business applications. Students can then choose elective options to build on the foundational skills in the areas of marketing and bookkeeping/accounting fundamentals.

Program Outcomes:

Upon completion of the program, students are expected to be able to:

- Utilize industry standard business applications software.
- Demonstrate the ability to communicate effectively.
- Demonstrate ways to conduct oneself professionally in a business environment.

In addition to the outcomes listed above, depending upon elective options, students are expected to be able to:

- Apply industry standard accounting principles
- Utilize online and emerging technologies to enhance marketing strategy

Listed below are summaries of each course within the program.

Core Requirements (5 courses – 15 Semester Credit Hours)

BUS150 Introduction to Business 3 Credits

In this course, students will examine the foundations of business including the various functions, roles, and characteristics of business, in addition to business ownership and entrepreneurship.

The course introduces the business environment including organizational structure, the economic environment, and the use of technology to manage business information. Students will explore the importance of human resources management and teamwork. Students are familiarized with the financial markets and role of accounting and finance in business. Students are also introduced to business marketing, business within the global environment, and business ethics and corporate social responsibility.

CIS103 Introduction to Operating Systems and Software Applications 3 Credits

This course introduces students to the basics of operating systems, including user interfaces, settings, applications, and security features. Students will learn the basics of Microsoft Office business applications including Word, Excel, PowerPoint, and OneDrive as well as the basics of Google Apps including Google Docs, Google Sheets, Google Slides, Google Sites, Gmail, and Google+. Collaboration, sharing, and security options are covered for software application suites. The course covers essential computer security topics including the use of anti-malware applications, safe web browsing habits, corporate policies regarding computer safety, and password strength.

CIS101 Business Software Applications I 3 Credits

This course is designed to teach students the basic skills necessary to work with computers and the fundamental features of the Windows operating system. In addition, students will learn how to create and edit documents using word processing software and enter and edit data into workbooks and spreadsheets.

BUS105 Business Professionalism 3 Credits

This course will focus on the importance of developing a reputation of professionalism both inside and outside of the work setting. This course covers the importance of goal setting and time management as it relates to increasing productivity and achieving a healthy work/life balance, what it means to be an accountable professional and how to build and cultivate relationships among colleagues and peers.

COM102 Professional Communication Skills 3 Credits

This course reviews the skills necessary to communicate effectively in a professional environment using both oral and written communication channels. The course provides strategies to write and deliver clear, concise messages tailored to a particular audience. Through lessons, practice activities, and simulations, students will review strategies to listen effectively, speak clearly and assertively, and use proper grammar in written and verbal communications.

Elective Options (students must choose 3 elective courses – 9 Semester Credit Hours)

MATH101 Business Math 3 Credits

This course will provide students with the tools necessary to review basic mathematical arithmetic including whole numbers, fractions, decimals, percentages, ratios, rates, proportions, geometry, measurement, basic statistics, and signed numbers. Students will gain knowledge of these mathematical concepts through business workplace scenarios.

ACT102 Bookkeeping Fundamentals 3 Credits

This course provides a basic introduction to accounting terms and concepts and why they are important to understand. Students will learn how these concepts are applied in everyday business situations through completion of related accounting exercises and problems. Students will also learn how to create financial statements and develop an understanding of the importance of the information they give about a company.

ACT105 Computerized Bookkeeping 3 Credits

This course is an introduction to computerized bookkeeping. Using QuickBooks Online, students will learn how to navigate and use this software application. This course covers setting up a new company, customizing the chart of accounts, and working with the products and services lists. Sales and invoicing customers, purchases, entering bills, and expenses from vendors, and staying on top of the accounts receivable and accounts payable balances are covered in detail. Giving other users, such as accountants, access to data is also covered.

BUS205 Business Marketing 3 Credits

This course is an introduction to marketing and its key concepts. The course examines the different marketing strategies organizations use to interact with their customers and prospective customers. In today's highly competitive business environment, organizations need to use a multichannel approach to marketing.

Students may transfer credits from the Business Administration program into the Associate of Science in Business Administration program. Students should be aware that while the transfer credit option is available, the Business Administration program is a certificate

program and not a degree program.

Certificate in Human Resources

Program Length: 18 Semester Credit Hours

Program Overview:

The Human Resources program provides students with the knowledge, strategies, and competency requirements of a human resources professional. Students will develop skills in professionalism, communication, workforce management, and ethics. Concepts and strategies for leadership, relationship management, critical evaluation, team building, and working with virtual teams will also be explored. In addition, students will gain insight into the world of lean thinking and practice, Six Sigma and the DMAIC (Define, Measure, Analyze, Improve, Control) method. Understanding Six Sigma is essential for HR professionals in working as part of the team in building an effective workforce and improving internal processes. In addition, the program focuses on developing skills in professionalism, communication, and ethics. Concepts and strategies for leadership, team building, and working with virtual teams will also be explored.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- List the structure and function of the HR department in supporting corporate strategy
- Summarize effective employee recruitment, engagement, and retention strategies
- Describe key employment laws and regulations that affect HR
- Define the principles of business process improvement, its methodology, and the relationship to HR
- Discuss the importance of professional communication and interpersonal skills for HR professionals
- Compare and contrast management styles
- Discuss the value of performance reviews and employee engagement

Listed below are summaries of each course within the program.

BUS203 Human Resources Management I 3 Credits

In this course, students will define human resources, understand the structure of the HR function within an organization, explore the key competency requirements of HR, including leadership and ethical practice, business acumen and relationship management, consultation and critical evaluation, global and cultural effectiveness, and communication. The course covers the steps in corporate social responsibility and HR's role and responsibilities in the implementation of a corporate code of conduct as well as employment laws and regulations.

BUS210 Human Resources Management II 3 Credits

In this course, the fundamentals of communicating effectively as an HR practitioner are explored. The course covers strategies for conducting a job analysis, ensuring an equitable compensation structure and implementing a total rewards program. Students will analyze the broad impact of employee engagement on the bottom line and the business value of measuring and implementing strategies that focus on fostering a culture of engagement. Employee relations, employment regulations, and behavioral and disciplinary issues and resolutions are explored. Finally, the importance of HR's role in labor relations, working with unions, and the collective

bargaining process is reviewed.

BUS220 Human Resources Management III 3 Credits

This course will provide a broad overview of HR functional core responsibilities. Students will begin with a study of workforce management coupled with identifying HR's role in leveraging technology and data management. They will learn to recognize potential risks and the response process associated with HR activities. Through discussions, activities and online exploration students will also identify key HR responsibilities related to organizational effectiveness and development as well as key business and HR strategies. The course will conclude with a study of global HR and provide students with an understanding of the importance of diversity and inclusion in the workplace.

BUS230 Introduction to Business Process Improvement 3 Credits

In this course, concepts of process management are explored. The course covers the foundations and principles of process improvement, team basics, roles, and responsibilities, as well as quality tools and metrics used. In addition, an introduction to each stage of the DMAIC method is covered.

BUS105 Business Professionalism 3 Credits

The course examines several areas that fall under the category of Business Professionalism. Students will review the importance of goal setting and time management, the principles of business etiquette, and strategies for conducting themselves professionally. The course covers personal accountability and developing a personal accountability framework, developing emotional intelligence, professional networking and cultivating peer relationships, and dealing with conflict situations.

BUS204 Business Management 3 Credits

This course focuses on the development of leadership skills and building effective and functional teams. The course covers strategies for motivating employees, communicating vision, and leading through positive influence. The course will review concepts for leveraging leadership techniques such as building innovation cultures, leading teams through change, building a leadership development plan, and aligning unit goals and imperatives. The course explores strategies for creating a positive atmosphere and becoming an inspirational leader. The course also covers women in leadership, leading virtual teams, developing business acumen, and gaining insight through organizational awareness. Strategies for optimizing performance on a team and leveraging team leadership skills will also be reviewed.

Project Management

Program Length: 18 Semester Credit Hours

Program Overview:

The Project Management program provides students with the knowledge and skills to manage projects effectively. Students will examine project phases and life cycles and develop communication skills for engaging key project stakeholders. They will learn how to initiate, plan, execute, monitor, and close a project. Furthermore, students will explore key project constraints, such as scope, time, and cost, and develop work breakdown structures, schedules, budgets, and risk registers to plan and execute projects successfully. Upon completion of the program, students will be able to manage risks, procurements, and resources, in combination with quality assurance and quality control processes to ensure a high-quality project deliverable.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Plan and manage the scope of a project
- Create a work breakdown structure (WBS)
- Develop a project management plan
- Monitor and control project work
- Develop and manage a project schedule
- Develop and manage a project budget
- Perform quality assurance and quality control
- Communicate with project stakeholders
- Plan and conduct project procurements
- Identify, analyze, and strategize responses for project risks
- Manage project resources and develop project teams

Listed below are summaries of each course within the program.

PM131 Project Management Framework Essentials & Business Domain 3 Credits

This course provides the student with an understanding of the principles of the project management framework and the project management business environment domain in alignment with standards accepted by the Project Management Institute (PMI®).

The project management framework consists of the processes, tasks, and tools used to take a project from start to finish. It encompasses the key components required for:

- Planning
- Managing
- Governing projects

The project management business environment domain consists of high-level knowledge that is essential to the practice of project management applying to:

- Planning and managing project compliance
- Evaluating and delivering project benefits and value
- Evaluating and addressing external business environmental changes for impact on scope, and
- Supporting organizational change

The course will identify key project management concepts and terms and provide information about the variables that can influence project outcomes, influence of project stakeholders, organizational influences on a project, and how organizations evaluate which projects to pursue and monitor and track project value.

PM132 Project Management People Domain 3 Credits

This course provides the student with an understanding of the principles of the project management people domain in alignment with standards accepted by the Project Management Institute (PMI®).

The project management people domain consists of the soft skills required to successfully

manage projects. These skills include processes, tasks, and tools embedded in the project communications management, project stakeholder management, and project resource management knowledge areas that are employed to:

- Lead project teams
- Create and develop teams
- Lead project teams in an Agile/Adaptive project life cycle
- Manage project resources
- Communicate effectively as a project manager in Traditional/Predictive project life cycles
- Effectively engage with team members and other project stakeholders as a project manager in Traditional/Predictive project life cycles
- Effectively engage and communicate with team members and other project stakeholders as a project manager in Adaptive/Agile project life cycles

PM133 Project Management Process Domain I 3 Credits

The project management process domain consists of the technical skills required to successfully manage projects. This course addresses the processes, tasks, and tools embedded in the project integration management, and project scope management knowledge areas that are employed to:

- Understand the ongoing interactions between project management knowledge area processes during project Initiation, Planning, Execution, Monitoring and Controlling, and Closing
- Integrate accepted change requests into the project management plan
- Document project activities
- Manage the project through its phases
- Communicate project deliverables to project stakeholders effectively as a Project Manager in Traditional/Predictive and Agile/Adaptive project life cycles
- Maintain project artifacts
- Determine major project stakeholders
- Gather project requirements in Traditional/Predictive and Agile/Adaptive project life cycles
- Define the project scope in Traditional/Predictive and Agile/Adaptive project life cycles
- Manage project Scope requirements in Traditional/Predictive and Agile/Adaptive project life cycles

PM134 Project Management Process Domain II 3 Credits

The project management process domain consists of the technical skills required to successfully manage projects. This course addresses the processes, tasks, and tools embedded in the project schedule management knowledge area that are employed to:

- Plan a schedule in Traditional/Predictive life cycles
- Define activities in Traditional/Predictive life cycles
- Create project schedules in Traditional/Predictive life cycles
- Optimize schedule networks in Traditional/Predictive project life cycles
- Monitor and control the project schedule during the project in Traditional/Predictive project life cycles
- Plan and track work in Agile/Adaptive project life cycles

PM135 Project Management Process Domain III 3 Credits

The project management process domain consists of the technical skills required to

successfully manage projects. This course addresses the processes, tasks, and tools embedded in the project cost management and project quality management knowledge areas that are employed to:

- Plan a budget in Traditional/Predictive life cycles
- Estimate activity costs in Traditional/Predictive life cycles
- Create project budgets in Traditional/Predictive life cycles
- Optimize schedule networks in Traditional/Predictive project life cycles
- Monitor and control the project budget during the project in Traditional/Predictive project life cycles
- Control the project budget using earned value management (EVM) calculations
- Plan and track work costs in Agile/Adaptive project life cycles
- Create a project quality plan
- Establish project quality standards
- Implement project quality assurance
- Implement project quality control
- Delivery project products, services, and results per the project quality standards
- Delivering project quality in Agile/Adaptive project life cycles

PM136 Project Management Process Domain IV 3 Credits

The project management process domain consists of the technical skills required to successfully manage projects. This course addresses the processes, tasks, and tools embedded in the project risk management and project procurement management knowledge areas that are employed to:

- Define and identify potential project risk events
- Perform project risk analysis
- Manage and control project risk
- Implement project procurement strategies
- Perform vendor selection
- Manage and control selected vendors

Computer Information /Integration Technology

Computer Support Technology

Program Length: 18 Semester Credit Hours

Program Overview:

Computers are an integral part of everyday life at home, work, school, and nearly everywhere else! This program will provide students with the skills required to provide day-to-day administration, maintenance, and support of various computer systems, computing devices, and networks.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Create and manage files and folders on a PC
- Provide technical support to customers
- Install, configure, optimize, secure, and manage Windows
- Apply effective troubleshooting processes to identify and remedy problems with

hardware and networks

- Install and configure various hardware, peripherals, expansion cards, RAM, and devices
- Setup, configure, troubleshoot, and maintain a wired and wireless network
- Setup security and intrusion detection systems and mitigate against various threats and attacks in a network environment

Listed below are summaries of each course within the program.

CIS100 Computing Fundamentals 3 Credits

This course will introduce students to basic computer principles. It covers basic IT literacy and ensures one understands the different terminology and the various concepts involved in the IT industry. It serves as a great starting point for those getting started in information technology by providing foundational concepts.

DTI115 Customer Support & Service Management 3 Credits

The Customer Support and Service Management course aims to equip students with skills essential for building customer relationships and providing service and support. The course caters to the unique needs of digital technology integration customer support services because it uses examples specific to the industry. It also discusses various strategies for customer relationship management. Students acquire business etiquette skills and are trained in managing conflicts and stressful situations.

CIS105 Computer Repair and Maintenance I 3 Credits

In this course, students will review the various features, types, and components of mobile devices and how to install and setup some of these features and components. The course will introduce students to various networking concepts including how to set up certain networks. The various hardware components and peripherals in computer systems will be covered in detail. Students will also review print technologies, virtualization, cloud computing, and will learn how to apply troubleshooting skills to hardware and networking issues.

CIS207 Computer Repair and Maintenance II 3 Credits

This course will enable students to understand the features of mobile and workstation operating systems. Students will explore how to use physical and logical security controls to secure mobile devices, workstations, and networks. This course will cover how to troubleshoot and resolve common software issues. Finally, it will explore operational procedures such as professionalism, safety procedures, and disaster recovery methods.

CIS204 Network Management I 3 Credits

This course will provide learners with the basic concepts of networking, including network models, such as the OSI model and the TCP/IP model and the protocols and applications that function within these models. Students will learn the basics of routing and switching operations and the protocols used on most networks today. The course explores virtual networking and how to work with wireless technologies to create a functional wireless network.

CIS212 Network Management II 3 Credits

This course will provide learners with a view of securing networks using physical (e.g.

badges), logical (e.g. policies), and technical controls (e.g. port security). Students will learn network troubleshooting methodologies and how these can be applied to resolving connectivity, performance, and service issues on networks.

Principles of Cybersecurity

Program Length: 18 Semester Credit Hours

Program Overview:

The Principles of Cybersecurity program will provide students with a foundation of the principles of methods and technology that frame and define cybersecurity. Students will gain insight into the importance of cybersecurity and the integral role of cybersecurity professionals. Students will explore foundational cybersecurity principles, security architecture, risk management, attacks, incidents, and emerging IT and IS technologies.

Program Outcomes:

Upon completion of the program, students are expected to be able to:

- Demonstrate knowledge of basic IT terminology, concepts, and principles integral to the field of information technology.
- Explain fundamental concepts of information security, including roles, strategic planning, cybersecurity, risk identification, assessment, mitigation, and business continuity.
- Identify essential aspects of cloud computing, including types, characteristics, benefits, challenges, and risks.
- Explain the evolution of cloud computing and services and identify scenarios where cloud products and services can be valuable in enhancing business processes.
- Exhibit comprehension of the basic principles of network security, risk assessments and security audits, and the strategies for attack defense, access control, identity management, and physical security.
- Demonstrate knowledge of advanced cybersecurity concepts necessary for securing network infrastructure across cloud-based and other services, including compliance considerations, network analysis and monitoring, and the use of predictive analytics for maintaining cybersecurity.

Listed below are summaries of each course within the program.

CIS100 Computing Fundamentals 3 Credits

This course will introduce students to basic computer principles. It covers basic IT literacy and ensures one understands the different terminology and the various concepts involved in the IT industry. It serves as a great starting point for those getting started in information technology by providing foundational concepts.

CIS254 IT Fundamentals – Security 3 Credits

This course provides a foundation in information security. Participants will explore foundational concepts, roles, and strategic planning in the field. The course covers cybersecurity, risk identification, assessment, and mitigation. Topics include network and infrastructure security, physical security, cyber threats, social engineering, and business continuity. Students will learn best practices, tools, and methodologies to protect against security risks. By course completion, students will have gained a strong understanding of

- Examine the skills and procedures used in communicating via radio in an emergency situation.
- Assess communications principles in a public safety environment.
- Compare and contrast structures and roles in security, justice, and social support systems.
- Evaluate procedures used in responding to emergency situations.
- Identify key Homeland Security responsibilities including intelligence, risk assessments, and vulnerability assessments.
- Describe standard investigative procedures.
- Examine the roles and responsibilities in the criminal justice system.

Listed below are summaries of each course within the program.

HSM101 Introduction to Homeland Security 3 Credits

The student will be introduced to the history of the Department of Homeland Security, the key positions within the department, and the critical plans, positions, and processes the department has established. The course will address the critical areas of infrastructure protection, border security, and counter- terrorism efforts.

CRJ101 Introduction to Criminal Justice 3 Credits

This course examines the roles and responsibilities of the elements of the comprehensive criminal justice system including police/security, courts, corrections, and social services. The course addresses the systems involved in the criminal justice system and evaluates the interaction between criminal justice system components. The course examines key concerns in drugs and the relationship to crime trends.

CRJ201 Investigations 3 Credits

This course addresses the principles of investigations from the perspective of law enforcement and the private sector including loss prevention and private investigators. The course addresses standard investigative procedures and practices from crime scenes to preparation for courtroom testimony. The course also includes information regarding careers in investigations.

HSM201 Security Principles 3 Credits

This course addresses the principles of security as they relate to homeland security operations. A focus on the role of intelligence and counter-intelligence in security is discussed. In addition, the student will analyze and assess risk in international travel environments.

CRJ102 Tactical Communications 3 Credits

This course addresses the procedures and practices of effective communication in a law enforcement or security environment. The course presents the techniques of effective interpersonal verbal and written communication as well as the applied techniques of communications as an investigative tool. The course examines communications at an organizational level in regards to public communication effectiveness.

CRJ104 Patrol Procedures 3 Credits

This course addresses the elements of patrol and first response consistent with standards established by law enforcement. It will prepare the student to handle a wide variety of situations encountered in the field including bomb and explosive device incidents, crowd control, and emergency incidents. The student will be introduced to the theory of procedures and practices in operating an emergency vehicle.

Healthcare Administration

Medical Office Administration

Program Length: 24 Semester Credit Hours

Program Overview:

Medical Office Administration skills are crucial to anyone who wants to work in a healthcare administrative capacity including front office positions such as a Medical Office Administrative Assistant or Receptionist. The healthcare industry, which includes hospitals, physicians' offices, clinics, nursing homes, home health agencies, HMOs, and government agencies, all utilize individuals who perform functions that require this knowledge and these skills. This program will assist individuals to develop skills in office procedures typical in a medical office environment. The program also provides students with knowledge on medical anatomy and terminology essential to work in any healthcare environment.

Overall Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Use business software applications to create and manage documents, spreadsheets, presentations, and email communications
- Describe how to professionally greet patients, answer phones, schedule appointments, and take messages
- Identify the meaning of, use, and understand medical terms
- Protect the security of patient records to ensure that confidentiality is maintained
- Compile and maintain patient's electronic medical records, and ensure completeness, accuracy, and compliance with regulations
- List and describe the steps in the medical billing cycle
- Demonstrate professionalism in every aspect of their role as a medical office professional

Listed below are summaries of each course within the program.

MED135 Medical Office Procedures 3 Credits

Throughout this course, students will understand the duties and responsibilities of the medical assistant, focusing on the administrative function. This includes learning about their role as part of a healthcare team and the various environments in which they may seek employment, the importance of professionalism and ways to build and improve their professional skills, the various law and legal aspects that govern the healthcare environment as well as the many ethical issues that play into their interactions and patient care.

MED101 Medical Terminology 3 Credits

This course introduces students to the language of medicine. Students will understand how medical terms are formed and how to build them using combining forms, prefixes, and

suffixes. Students will learn the structure and function of various body systems and about the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED103 Medical Office Communications 3 Credits

In this course, students are taught the skills necessary to communicate effectively in a professional medical environment using both oral and written communication channels. Students will learn the strategies to write and deliver clear, concise messages and documents typical of the medical office that comply with HIPAA requirements. Through lessons, practice activities, and simulations, students are taught proper communication techniques including best practices for verbal and non-verbal communication, managing the telephone, and creating written correspondence.

MED104 Medical Office Administrative Skills 3 Credits

In this course, students will learn the administrative duties and responsibilities typical in the medical office. These include front office procedures, appointment scheduling, office supply inventory, medical record preparation, and patient confidentiality and privacy. In addition, students will learn computer applications and software used in the medical office, the medical record and will perform electronic health record (E.H.R.) simulation activities. The course also covers the procedures for opening and closing the medical office each day and care of facilities and medical equipment.

MED110 Electronic Health Records 3 Credits

Medical professionals who work with important patient data are required to abide by federal and state laws, as well as accreditation and regulatory agency requirements that govern the handling of patient information. As such, it is extremely important for medical professionals to remain up to date on the emerging technological trends as well as regulatory requirements. This course focuses on the health IT ecosystem with a specific focus on the role of electronic health records (EHRs).

MED115 Introduction to Medical Billing and Coding 3 Credits

This course introduces the basics of medical billing and coding, as well as providing a general understanding of medical insurance and the various payers. It offers a broad overview of the revenue cycle and introduces how to successfully utilize the medical insurance claim process. This course also introduces the major code sets used in the health care industry.

MED111 Business Practices for the Medical Office 3 Credits

In this course, students will learn how to perform business practices typical of the medical office. These include preparing insurance claims, compliance, Medicare assignment, types of healthcare reimbursement, and billing secondary insurance. Students will also learn the billing cycle, processing patient payments and posting, credit and balances, refunds, and collection procedures. The course also includes accounts payable and accounts receivable, credit card processing procedures, general financial transactions, and common banking procedures.

MED119 Medical Office Workplace Readiness 3 Credits

In this course, students will learn the skills required to function in the medical office environment. Students will learn how to ensure compliance with Occupational Safety and

Health Administration (OSHA) requirements including evacuation plans and emergency procedures. In addition, students will learn proper infection control procedures. The course includes technologies used in the healthcare environment including telehealth virtual appointments and meetings and social media literacy. In addition, the course provides students with the skills to implement a strategic career plan including networking, resume writing, interview skills, and follow up.

Medical Billing and Coding

Program Length: 36 Semester Credit Hours

Program Overview:

Medical coding and billing skills are essential to the economic viability of the healthcare industry. Medical coding is the process of translating the results of a patient's healthcare visit into a code that is then used to create a bill or claim that gets submitted to the insurance company for evaluation to determine the amount of payment from each the insurance company and the patient, ensuring the healthcare provider is properly compensated for their services. The healthcare industry, which includes hospitals, physicians' offices, clinics, nursing homes, home health agencies, HMOs, and government agencies, all utilize individuals who perform functions that require this knowledge and these skills. This program will assist individuals to develop skills in office procedures typically required in any healthcare setting. Students will develop the skills to look up and assign appropriate codes and follow a systematic billing process to create claims for the various payers. The program also provides students with knowledge on medical terminology, anatomy, and physiology which is essential to work in any healthcare environment.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Perform administrative functions relating to the medical environment.
- Describe the structure and function of the various body systems and identify the pathophysiologic conditions and disorders, diagnostic procedures, and treatment options for each.
- Compile and maintain patient's electronic medical records, and ensure completeness, accuracy, security, confidentiality, and compliance with regulations.
- Accurately translate reports from healthcare providers into appropriate medical codes using ICD-10, CPT, and HCPCS code sets and enter the codes into a form and/or software.
- Create and submit accurate claims, create patient bills, and apply industry-standard payment methodologies.

Listed below are summaries of each course within the program.

MED135 Medical Office Procedures 3 Credits

Throughout this course, students will understand the duties and responsibilities of the medical assistant, focusing on the administrative function. This includes learning about their role as part of a healthcare team and the various environments in which they may seek employment, the importance of professionalism and ways to build and improve their professional skills, the various law and legal aspects that govern the healthcare environment as well as the many ethical issues that play into their interactions and patient care.

MED101 Medical Terminology 3 Credits

This course introduces students to the language of medicine. Students will understand how medical terms are formed and how to build them using combining forms, prefixes, and suffixes. Students will learn the structure and function of various body systems and about the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED103 Medical Office Communications 3 Credits

In this course, students are taught the skills necessary to communicate effectively in a professional medical environment using both oral and written communication channels. Students will learn the strategies to write and deliver clear, concise messages and documents typical of the medical office that comply with HIPAA requirements. Through lessons, practice activities, and simulations, students are taught proper communication techniques including best practices for verbal and non-verbal communication, managing the telephone, and creating written correspondence.

MED104 Medical Office Administrative Skills 3 Credits

In this course, students will learn the administrative duties and responsibilities typical in the medical office. These include front office procedures, appointment scheduling, office supply inventory, medical record preparation, and patient confidentiality and privacy. In addition, students will learn computer applications and software used in the medical office, the medical record and will perform electronic health record (E.H.R.) simulation activities. The course also covers the procedures for opening and closing the medical office each day and care of facilities and medical equipment.

MED140 Anatomy and Physiology I 3 Credits

This is the first of a two-course series that provides a comprehensive study of the anatomy and physiology of the human body. In this course, students will review the overall organization of the human body and will identify the anatomical locations of the various organs and systems. The course will discuss genetic and congenital disorders, and the structure and function of cells and cell division. The nervous, sensory, integumentary, muscular, and skeletal systems will be covered including the structure, function, common pathology, diagnostic procedures, and treatments. The course is designed for students who have little formal knowledge of the human body who wish to pursue a career in health-related professions.

MED141 Anatomy and Physiology II 3 Credits

This course is a continuation of Anatomy and Physiology I. This course covers the respiratory, circulatory, immune, digestive, urinary, endocrine, and reproductive systems in detail including the structure and function of each system, diseases and disorders, diagnostic procedures, and treatment options.

MED106 Medical Billing 3 Credits

This course focuses on the medical billing processes providing information on medical insurance and the various payers, revenue cycle management, reimbursement methodologies, claim follow-up and payment processing, as well as the legal aspects pertaining to health insurance and claims processing. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course.

MED107 Medical Coding I 3 Credits

This course is designed to impart an understanding of coding and classification systems to assign valid diagnostic and procedural codes. The course provides the comprehensive coverage needed to understand and work with medical insurance related to the application of ICD, CPT, and HCPCS codes and teaches how insurance reimbursement is directly related to proper code assignment. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course. This first course will specifically focus on ICD-10 and HCPCS codes.

MED117 Medical Coding II 3 Credits

This course is designed to impart an understanding of coding and classification systems to assign valid diagnostic and procedural codes. The course provides the comprehensive coverage needed to understand and work with medical insurance related to the application of ICD, CPT, and HCPCS codes and teaches how insurance reimbursement is directly related to proper code assignment. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course. This second course will specifically focus on CPT codes.

MED108 Health Insurance Processing 3 Credits

This course focuses on claim preparation and transmission, working with payers (private payers/Blue Cross and Blue Shield, Medicare, Medicaid, TRICARE and CHAMPVA, and Workers' Compensation and Disability), and compliance. Online simulation exercises will provide the opportunity to practically apply what is covered throughout the course.

MED118 Medical Coding Lab 3 Credits

This course will provide students with the opportunity to practically apply all the concepts covered throughout the program. Students will be completing online simulation exercises and assignments given various scenarios to build skills in medical billing, medical coding, and processing insurance claims in both inpatient and outpatient settings.

MED119 Medical Office Workplace Readiness 3 Credits

In this course, students will learn the skills required to function in the medical office environment. Students will learn how to ensure compliance with Occupational Safety and Health Administration (OSHA) requirements including evacuation plans and emergency procedures. In addition, students will learn proper infection control procedures. The course includes technologies used in the healthcare environment including telehealth virtual appointments and meetings and social media literacy. In addition, the course provides students with the skills to implement a strategic career plan including networking, resume writing, interview skills, and follow up.

Medical Assisting

Program Length: 42 Semester Credit Hours

Program Overview:

The Medical Assisting program is designed to prepare students to function as professionals in a variety of healthcare settings. The student will gain skills to perform administrative tasks including patient reception, health records management, billing, and payment processing. Additionally, students will gain skills to perform clinical tasks such as assisting

with minor surgery, taking vital signs, preparing patients for examinations, performing EKG, obtaining health history, specimen collection, administering first aid, and other related tasks commonly performed in a physician's office or other outpatient healthcare setting.

Overall Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Communicate effectively and professionally both verbally and in writing.
- Perform administrative functions relating to the medical environment.
- Compile and maintain patient's electronic medical records, and ensure completeness, accuracy, security, confidentiality, and compliance with regulations.
- Describe the processes, procedures, and terms related to the medical billing cycle.
- Describe the structure and function of the various body systems and identify the pathophysiologic conditions and disorders, diagnostic procedures, and treatment options for each.
- List and discuss best practices for preparing, administering, and documenting medications and immunizations following the six rights of medication administration.
- Identify best practices for safety and infection control in a medical office.
- Describe the role of the medical assistant in preparing the patient for and assisting with patient examinations, surgical, and lab procedures commonly performed in a physician's office.

Listed below are summaries of each course within the program.

MED135 Medical Office Procedures 3 Credits

Throughout this course, students will understand the duties and responsibilities of the medical assistant, focusing on the administrative function. This includes learning about their role as part of a healthcare team and the various environments in which they may seek employment, the importance of professionalism and ways to build and improve their professional skills, the various law and legal aspects that govern the healthcare environment as well as the many ethical issues that play into their interactions and patient care.

MED101 Medical Terminology 3 Credits

This course introduces students to the language of medicine. Students will understand how medical terms are formed and how to build them using combining forms, prefixes, and suffixes. Students will learn the structure and function of various body systems and about the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED103 Medical Office Communications 3 Credits

In this course, students are taught the skills necessary to communicate effectively in a professional medical environment using both oral and written communication channels. Students will learn the strategies to write and deliver clear, concise messages and documents typical of the medical office that comply with HIPAA requirements. Through lessons, practice activities, and simulations, students are taught proper communication techniques including best practices for verbal and non-verbal communication, managing the telephone, and creating written correspondence.

MED104 Medical Office Administrative Skills 3 Credits

In this course, students will learn the administrative duties and responsibilities typical in the medical office. These include front office procedures, appointment scheduling, office supply inventory, medical record preparation, and patient confidentiality and privacy. In addition, students will learn computer applications and software used in the medical office, the medical record and will perform electronic health record (E.H.R.) simulation activities. The course also covers the procedures for opening and closing the medical office each day and care of facilities and medical equipment.

MED115 Introduction to Medical Billing and Coding 3 Credits

This course introduces the basics of medical billing and coding, as well as providing a general understanding of medical insurance and the various payers. It offers a broad overview of the revenue cycle and introduces how to successfully utilize the medical insurance claim process. This course also introduces the major code sets used in the health care industry.

MED111 Business Practices for the Medical Office 3 Credits

In this course, students will learn how to perform business practices typical of the medical office. These include preparing insurance claims, compliance, Medicare assignment, types of healthcare reimbursement, and billing secondary insurance. Students will also learn the billing cycle, processing patient payments and posting, credit and balances, refunds, and collection procedures. The course also includes accounts payable and accounts receivable, credit card processing procedures, general financial transactions, and common banking procedures.

MED110 Electronic Health Records 3 Credits

Medical professionals who work with important patient data are required to abide by federal and state laws, as well as accreditation and regulatory agency requirements that govern the handling of patient information. As such, it is extremely important for medical professionals to remain up to date on the emerging technological trends as well as regulatory requirements. This course focuses on the health IT ecosystem with a specific focus on the role of electronic health records (EHRs).

MED140 Anatomy and Physiology I 3 Credits

This is the first of a two-course series that provides a comprehensive study of the anatomy and physiology of the human body. In this course, students will review the overall organization of the human body and will identify the anatomical locations of the various organs and systems. The course will discuss genetic and congenital disorders, and the structure and function of cells and cell division. The nervous, sensory, integumentary, muscular, and skeletal systems will be covered including the structure, function, common pathology, diagnostic procedures, and treatments. The course is designed for students who have little formal knowledge of the human body who wish to pursue a career in health-related professions.

MED141 Anatomy and Physiology II 3 Credits

This course is a continuation of Anatomy and Physiology I. This course covers the respiratory, circulatory, immune, digestive, urinary, endocrine, and reproductive systems in detail including the structure and function of each system, diseases and disorders, diagnostic procedures, and treatment options.

MED142 Clinical Procedures I 4 Credits

The responsibility of preparing patients for examinations and procedures performed by the providers is mainly the medical assistant. In this course, the medical assistant's role in the patient examination process will be stressed. Ensuring patient safety by minimizing disease transmission will be discussed as well as preparing a patient for specific examinations and procedures. The assistant's role of educating the patient in healthful activities and disease or disorder management is covered. The process to conduct accurate screening and the procedures to document accurately in the medical record are also reviewed.

MED143 Clinical Procedures II 4 Credits

Medical assistants may be required to assist the provider in minor office surgeries and various treatment modalities, as well as provide patients with education on their treatment plan. Throughout this course, students will be shown how to maintain surgical asepsis, vital to preventing disease transmission, before, during, and after any of the invasive procedures performed in the medical office or clinic. Students will also develop a good working knowledge of the care and function of basic instruments used in minor surgical procedures and how to assist the provider and properly prepare the patient. This course also covers several rehabilitation methods, such as body mechanics, mobility devices, and range-of-motion exercises, as well as healthy living techniques that include nutritional guidelines and the significance of diet, exercise, weight control, sleep, and the way personal behaviors influence health. Finally, this course will review what to do if confronted with an emergency or accidental situation including basic first aid skills and CPR.

MED144 Lab Procedures 3 Credits

This course will provide students with an understanding of the lab procedures typical of a physician's office laboratory. Students will study various laboratory tests and procedures with a focus on safety. They will review how to recognize safety, security, and operation hazards in the medical and laboratory environment and identify best practices for eliminating and/or minimizing them. Students will also review the purpose for common diagnostic tests and identify how to differentiate between normal and abnormal results.

MED145 Medication Administration 3 Credits

In this course, students will be introduced to the different classifications of medications, including indications for use, desired effects, side effects, contraindications, and adverse reactions. Students will study the common drug forms and routes of administration in addition to the required elements and purpose of a prescription and medication order. The course covers the Seven Rights of medication administration and how to apply them, how to avoid and handle medication errors, and how to calculate medication dosages.

MED146 Career Development 1 Credit

This course provides students with the skills required to implement a strategic career plan. Topics include self-assessment, employability skills, career decision-making, roles and responsibilities, organizational culture, launching an employment campaign, networking, lifelong learning, and professional development. Students will practice entering several types of patient data into a simulated electronic health record (E.H.R.) system similar to those typically used in a healthcare facility. In addition, the course will provide students with the opportunity to go through practice questions in preparing for various certifications.

Program Length: 20 Semester Credit Hours

Program Overview:

The Introduction to Clinical Medical Assisting program is designed to prepare students with the clinical skills needed to assist with patient care in a physician's office or other outpatient healthcare setting. The student will gain skills to perform clinical tasks such as assisting with minor surgery, taking vital signs, preparing patients for examinations, performing EKG, obtaining health history, specimen collection, administering first aid, and other related tasks commonly performed.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Demonstrate proficiency in medical terminology by correctly identifying and defining key medical terms and abbreviations commonly used in clinical settings.
- Describe the structure and function of the various body systems and identify the pathophysiologic conditions and disorders, diagnostic procedures, and treatment options for each.
- Identify best practices for safety and infection control in a medical office.
- Prepare patients for healthcare provider examinations and procedures, conduct accurate screening, and document appropriately in the medical record.
- Assist providers in minor office surgeries, including maintaining surgical asepsis, and providing patient education on treatment plans.
- Identify common diagnostic tests and differentiate between normal and abnormal results.

Listed below are summaries of each course within the program.

MED101 Medical Terminology 3 Credits

This course introduces students to the language of medicine. Students will gain an understanding of the way medical terms are formed and how to build medical terms using combining forms, prefixes, and suffixes. Students will learn the structure and function of various body systems and the diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

MED140 Anatomy and Physiology I 3 Credits

This is the first of a two-course series that provides a comprehensive study of the anatomy and physiology of the human body. This course focuses on the overall organization of the human body and the anatomical locations of the various organs and systems. The course will discuss genetic and congenital disorders, and the structure and function of cells and cell division. The nervous, sensory, integumentary, muscular, and skeletal systems will be covered including the structure, function, common pathology, diagnostic procedures, and treatments. The course is designed for students who have little formal knowledge of the human body who wish to pursue a career in health-related professions.

MED142 Clinical Procedures I 4 Credits

The responsibility of preparing patients for examinations and procedures performed by the providers is mainly the medical assistant. In this course, the medical assistant's role in the patient examination process will be stressed. Ensuring patient safety by minimizing disease

transmission will be discussed as well as preparing a patient for specific examinations and procedures. The assistant's role of educating the patient in healthful activities and disease or disorder management is covered. The process to conduct accurate screening and the procedures to document accurately in the medical record are also reviewed.

MED141 Anatomy and Physiology II 3 Credits

Building on the knowledge gained in Anatomy and Physiology I, this course provides an in-depth study of the respiratory, circulatory, immune, digestive, urinary, endocrine, and reproductive systems. Students will learn about the structure and function of each system, common diseases and disorders, diagnostic procedures, and available treatment options.

MED143 Clinical Procedures II 4 Credits

Medical assistants may be required to assist the provider in minor office surgeries and various treatment modalities, as well as provide patients with education on their treatment plan. Throughout this course students will be shown how to maintain surgical asepsis, which is vital to the prevention of disease transmission, before, during, and following any of the invasive procedures performed in the medical office or clinic. Students will also develop a good working knowledge of the care and function of basic instruments used in minor surgical procedures as well as how to assist the provider and properly prepare the patient. This course also covers several rehabilitation methods, such as body mechanics, mobility devices, and range-of-motion exercises, as well as healthy living techniques that include nutritional guidelines and the significance of diet, exercise, weight control, sleep, and the way personal behaviors influence health. Finally, this course will discuss what to do if confronted with an emergency or accidental situation including basic first aid skills and CPR.

MED144 Lab Procedures 3 Credits

This course will provide students with an understanding of the lab procedures typical of a physician's office laboratory. Students will study various laboratory tests and procedures with a focus on safety. Students will be taught how to recognize safety, security, and operation hazards in the medical and laboratory environment and identify best practices for eliminating and/or minimizing them. In addition, students will gain knowledge of the purpose for common diagnostic tests and identify how to differentiate between normal and abnormal results.

Pharmacy Technician (18 credits)

Program Length: 18 Semester Credit Hours

Program Overview:

The program covers pharmacology, medical terminology and abbreviations as related to pharmacy, pharmacy law and ethics, pharmacy math and dosage calculations, medication preparation, prescription processing, inventory, insurance billing, communication, and customer service skills. Upon successful completion of the program, students will be eligible for employment in a variety of pharmacy settings. Additionally, this program will prepare students to take a national certification examination to become a Certified Pharmacy Technician either through Pharmacy Technician Certification Board (PTCB) or National Healthcareer Association (NHA).

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Identify the knowledge, skills, and job responsibilities of a pharmacy technician
- Use standard pharmacy reference sources
- Identify the top 200 drugs and list their uses and side effects
- Carry out dosage calculations
- Identify the information contained on medication orders, prescriptions, and drug labels

Listed below are summaries of each course within the program.

MED151 Introduction to Pharmacy 3 Credits

This course is designed to familiarize the student with the specific knowledge and skills needed to pursue a career as a pharmacy technician. This course introduces the responsibilities of a pharmacy technician and common pharmacy practices and settings. In addition, the course will cover effective communication skills, interpersonal and time management skills, and the laws, regulations, and standards that apply to the field of pharmacy.

MED152 Pharmacology 3 Credits

This course introduces the science of pharmacology, pharmacodynamics, and pharmacokinetics and will expand the students' knowledge base on a variety of drugs and interactions. Topics covered in this course include methods of drug classification, over-the-counter and prescription medications, medication dosage routes and formulations.

MED153 The Dispensing Process 3 Credits

This course discusses the specific roles and responsibilities of the pharmacy technician in the prescription dispensing process. Throughout this course, students will be introduced to the various calculations, techniques, equipment, and tools used to perform sterile and non-sterile compounding as well as the operational roles in the pharmacy setting, including inventory management and business-related calculations.

MED154 Medication Safety and Quality Assurance 3 Credits

This course discusses how the safety and quality of medications are ensured in the pharmacy setting and best practices for maintaining patient compliance. Students will develop an understanding of how and why medication errors happen, what strategies can be employed to help prevent them, and which organizations directly support medication error prevention. Additional topics covered in this course include preventing the spread of infections in the healthcare setting, safe handling of hazardous drugs, and improving patients' medication adherence.

MED155 Pharmacy Practice Areas and Employment 3 Credits

This course describes various pharmacy settings and the role of the pharmacy technician within each, including the business and technical skills required and the importance of career preparation and development. This course also introduces students to the basics of medical billing and provides a general understanding of medical insurance and the various payers.

MED56 Pharmacy Technician Certification Preparation 3 Credits

Professional certification is a way to measure a person's competency to complete a specific job and can set you apart from others in your field when it comes to employment opportunities. If you wish to become a certified pharmacy technician, you will need to take and pass one of two exams: the National Healthcareer Association's (NHA) ExCPT exam or the Pharmacy Technician Certification Board's (PTCB) exam, known as the PTCE. This course is a comprehensive review of the concepts you will need to know to successfully complete and pass these certifications.

Healthcare Administrative Specialist

Program Length: 360 Hours/8 Months

Program Overview:

Medical Office Administration skills are crucial to anyone who wants to work in a healthcare administrative capacity including front office positions such as a Medical Office Administrative Assistant or Receptionist. The healthcare industry, which includes hospitals, physicians' offices, clinics, nursing homes, home health agencies, HMOs, and government agencies, all utilize individuals who perform functions that require this knowledge and these skills. This program will assist individuals to develop skills in office procedures typical in a medical office environment. The program also provides students with knowledge on medical anatomy and terminology essential to work in any healthcare environment.

Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Use business software applications to create and manage documents, spreadsheets, presentations, and email communications.
- Describe how to professionally greet patients, answer phones, schedule appointments, and take messages.
- Identify the meaning of, use, and understand medical terms.
- Protect the security of patient records to ensure that confidentiality is maintained.
- Compile and maintain patient's electronic medical records, and ensure completeness, accuracy, and compliance with regulations.
- List and describe the steps in the medical billing cycle.

Listed below are summaries of each course within the program.

MED170 Introduction to Electronic Health Records and Medical Office Practices

Throughout this course, students will understand the duties in the administrative front office of a healthcare facility. This includes the use of proper communication techniques, receptionist duties such as filing, appointment scheduling, financial administration, processing mail, care of facilities and medical equipment as well as the importance of maintaining patient confidentiality and privacy.

MED173 Medical Terms

This course introduces students to the language of medicine. Students will understand how medical terms are formed and how to build them using combining forms, prefixes, and suffixes. Students will learn the structure and function of various body systems and about the

diagnostic, procedural, laboratory, pathological, surgical, and pharmacological terms and abbreviations associated with each body system.

BUS109 Effective Workplace Communications

In this course, students are taught the skills necessary to communicate effectively in a professional medical environment using both oral and written communication channels. Students will learn the strategies to write and deliver clear, concise messages and documents typical of the medical office that comply with HIPAA requirements. Through lessons, practice activities, and simulations, students are taught proper communication techniques including best practices for verbal and non-verbal communication, managing the telephone, and creating written correspondence.

MED172 Medical Office Software Applications

In this course, students will learn the administrative duties and responsibilities typical in the medical office. These include front office procedures, appointment scheduling, office supply inventory, medical record preparation, and patient confidentiality and privacy. In addition, students will learn computer applications and software used in the medical office, the medical record and will perform electronic health record (E.H.R.) simulation activities. The course also covers the procedures for opening and closing the medical office each day and care of facilities and medical equipment.

MED176 Introduction to Medical Coding, Billing, and Health Insurance

This course introduces the basics of medical billing and coding, as well as providing a general understanding of medical insurance and the various payers. It offers a broad overview of the medical billing cycle and discusses how to successfully utilize the medical insurance claim process. This course also introduces the major code sets used in the healthcare industry.

MED177 Medical Office Business Practices

In this course, students will learn how to perform business practices typical of the medical office. These include preparing insurance claims, compliance, Medicare assignment, types of healthcare reimbursement, and billing secondary insurance. Students will also learn the billing cycle, processing patient payments and posting, credit and balances, refunds, and collection procedures. The course also includes accounts payable and accounts receivable, credit card processing procedures, general financial transactions, and common banking procedures.

Graduate Certificate in Applied Behavior Analysis

Program Length: 21 Semester Credit Hours

The program provides students with the fundamental skills and underlying principles and knowledge of Applied Behavior Analysis (ABA) along with practice-oriented skills. The program content is based on the Behavior Analyst Certification Board (BACB) 5th Edition Task List. Students will study the foundations of ABA including philosophical underpinnings, concepts and principles, measurement, data display, and interpretation, and experimental design. In addition to the foundational and theoretical knowledge taught in the program, students will learn practice-oriented skills including the ethics code for behavior analysts, behavior assessment, behavior-change procedures, selecting and implementing interventions, and personnel supervision and management.

Overall Program Outcomes:

Upon completion of this program, students are expected to be able to:

- Identify the goals of behavior analysis as a science.
- Define and provide examples of behavior, response, and response class.
- Demonstrate an understanding of measurement, data display, and interpretation in applied behavior analysis.
- Identify the defining features of single-subject experimental designs.
- Demonstrate knowledge of the ethical responsibilities of behavior analysts to their clients, supervisees, colleagues, and other stakeholders.
- Conduct an appropriate and systematic behavior assessment.
- Demonstrate an understanding of behavior-change procedures.
- Gather and analyze data that will inform the selection of appropriate intervention plans.
- Demonstrate knowledge of performance monitoring, feedback, and reinforcement systems.

INSTITUTIONAL POLICIES

Non-Discrimination Policy

Martinsburg College does not discriminate in offering access to its educational programs on the basis of race, color, gender, age, national origin, religion, creed, disability, veteran's status, sexual orientation, gender identity or gender expression.

Americans with Disabilities Act (ADA) & Veterans' Policies Martinsburg College does not discriminate against any applicant because of a physical or mental disability or because he or she is a disabled v e t e r a n , veteran of the Vietnam Era or other qualified veteran. For more information on services for students with disabilities, please see the information on the website at <http://martinsburgcollege.edu/consumer-information/services-students-disabilities/> or contact the Disability Coordinator, Ms. Rita Claypole at (304) 944-0296 or rclaypole@martinsburgcollege.edu

Students funded through the Veterans Administration

Students utilizing Veterans benefits typically enroll in no more than two courses consecutively over a period of eight weeks. This is the period that is certified for VA-funded students. At the completion of the eight-week period, students will not be certified for additional VA funding unless the student is in good academic standing. Students will only be certified for a maximum of two courses over an 8-week period.

Despite any policy to the contrary, for any students using U.S. Department of Veterans Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation and Employment (Ch. 31) benefits, while payment to the institution is pending from the VA, the institution will not:

- Prevent their enrollment;
- Assess a late penalty fee to;
- Require they secure alternative or additional funding;
- Deny their access to any resources (access to classes, libraries, or other institutional

facilities) available to other students who have satisfied their tuition and fee bills to the institution.

However, to qualify for this provision, such students may be required to:

- Produce the VA's Certificate of Eligibility by the first day of class;
- Provide written request to be certified;
- Provide additional information needed to properly certify the enrollment as described in other institutional policies (see our VA School Certifying Official for all requirements).

If you have any questions, please contact Rita Claypole at 304-944-0296 or rclaypole@martinsburgcollege.edu

Transfer of Credit Policy

Martinsburg College accepts transfer credits for enrollment into our programs. A maximum of three-fourths of the credits required may be awarded for transfer credit or a combination of transfer credit or equivalent credit (including challenge/test-out credits). As per accrediting agency requirements, the maximum amount of credit awarded for equivalent learning (including challenge/test out credits) may not exceed one-fourth of the credits required for a degree.

Military/Veterans Students

Martinsburg College provides a comprehensive review to evaluate and award credit for learning acquired through specialized military and civilian training and occupational experiences when applicable to a service member's program of study. We make every effort to provide our students with the maximum amount of credit for their previous education and training while adhering to the standards of good practice set forth by our accrediting agency. Military students may submit Joint Services Transcripts, Coast Guard College, and/or Community College of the Air Force (CCAF) transcripts for evaluation. Martinsburg College recognizes and awards credit recommended for military experiences in the American Council on Education (ACE) *Guide to the Evaluation of Educational Experiences in the Armed Services* as applicable for the service member's program. In addition to an institutional setting and courses/training offered by the military, other such programs recognized by the American Council on Education's Center for Adult Learning and Education Credentials program will be considered for transfer credit. Credits may also be earned through examinations including the Defense Activity for Non-Traditional Education Support (DANTES) Subject Standardized Testing (DSST), the College-Level Examination Program (CLEP), Assessment and Learning in Knowledge Spaces (ALEKS), and Excelsior College Exams. In addition, Martinsburg College awards credit for widely accepted industry certifications that relate to a student's program of study.

A maximum of three-fourths of the credits required may be awarded for transfer credit or a combination of transfer credit or equivalent credit (including challenge/test-out credits) into an associate's degree program. As per accrediting agency requirements, the maximum amount of credit awarded for equivalent learning (including challenge/test out credits) may not exceed one-fourth of the credits required for a degree.

Martinsburg College provides a no-fee credit evaluation review prior to enrollment. Students may submit unofficial transcripts for the review but actual credit can only be awarded upon receipt of official transcripts. Tuition fees will be adjusted based on the amount of credits transferred into the program.

For more information for transfer of credit for military students, please contact Martinsburg College's admissions department

For credits earned at an institution, students must have earned a minimum of a passing grade for any course to be evaluated for transfer credit. The course must have been taken at a postsecondary institution accredited by an agency recognized by the U.S. Department of Education or the Council for Higher Education Accreditation (CHEA). The courses taken must meet the requirements of the specific program. Students may also transfer credit earned at prior institutions in the areas of English, human communications (including, but not limited to foreign languages and speech), the arts and humanities, natural sciences, mathematics, and social sciences to meet the General Education requirement. In addition to an institutional setting, courses offered by the military and other such programs recognized by the American Council on Education's Center for Adult Learning and Education Credentials program will be considered for transfer credit. Credits may also be earned through examinations such as the College- Level Examination Program (CLEP), the Defense Activity for Non-Traditional Education Support (DANTES) Subject Standardized Testing (DSST), and widely accepted industry certifications. If a student wishes to have prior coursework evaluated, s/he must submit transcripts to the registrar/student services department at Martinsburg College. Transcripts from non-U.S. institutions must be evaluated by an appropriate third party and translated into English. The student will be notified within 10 days of the determination of the amount of credits that can be transferred. Students may appeal transfer of credit determinations by submitting a formal request to the Registrar's office. Appeals will be responded to within 2 weeks of receipt of the appeal. There is currently no fee for the evaluation of transfer credit. After a determination has been made regarding the amount of transfer credit awarded, if the student wishes to enroll in the program, the courses required will be adjusted to reflect the number of credits awarded. Tuition will be reduced based on the number of credits awarded.

Martinsburg College does not currently charge any fees to students for the evaluation of transcripts for transfer of credit. Tuition fees will be adjusted based on the amount of credits transferred into the program.

If an applicant feels that s/he has not received the appropriate transfer credit, s/he may appeal the decision by submitting a written appeal, with supporting documentation, to the Registrar/Director of Student Services within ten business days of the decision. The Registrar will review the appeal and make a final decision within ten business days.

Any graduate student of Martinsburg College may request guidance from the student services department regarding transferring credits earned at Martinsburg College to another institution. The college provides official transcripts at no charge and will provide course descriptions/syllabi to students, if required, to assist in the transfer of credit. It should be noted that the acceptance of credits/coursework earned at Martinsburg College **is determined by the receiving institution.**

Grading Policy

Grades are a measure of student achievement of the course learning objectives. Grades are typically based on a combination of percentage of correct answers on quizzes and tests throughout the course, assignments, and practical demonstrations of skills.

Students are expected to maintain at least a minimum grade point average (GPA) as outlined in the Satisfactory Academic Progress section. To earn a certificate or degree, a student must earn a minimum GPA of 2.0

Students can submit their coursework and check their grades and progress at any time via the online classroom environment. Under the menu option in the online classroom, students may select “Grades” to view the item graded, such as test, quiz, assignment, the grade assigned, and the number of test/assignments graded to date.

Grading Scale: Martinsburg College follows the grading scale listed below. Grades with a plus or minus indicate a high or low end grade that has been assigned. These grades may be assigned on individual assignments within a course or as the final course grade.

Grading Scale and Equivalents

Grade	Quality Points	Point Range %	Interpretation
A	4.0	93 – 100	Excellent
A-	3.7	90 – 92	
B+	3.3	87 – 89	
B	3.0	83 – 86	Above average
B-	2.7	80 – 82	
C+	2.3	77 – 79	
C	2.0	73 – 76	Average
C-	1.7	70 – 72	
D+	1.3	66 – 69	
D	1.0	60 – 65	Below Average
F	0.0	59 & below	Failure
W	0.0		Withdrawal
I**	0.0		Incomplete

**A grade of “Incomplete” is a temporary grade and may be given to a student to indicate that a student has a satisfactory record in course work, but for a valid reason is unable to complete the course during the regular time period. At the scheduled program completion date, if the student is issued with an Incomplete grade, s/he will have up to six months to replace the “I” grade. Failure to meet this requirement will result in the Incomplete grade being changed to a grade of F.

Please note: Students funded through employers or a funding agency should confirm with their employer/funding agency to see if there is a different requirement regarding the issuance of Incomplete grades as this could affect the student’s eligibility for funding. If students have any questions regarding the effect an Incomplete grade may have on funding, please contact the Student Services department who will be able to assist including contact the employer/funding agency for clarification.

While a “D” grade is considered satisfactory during a student’s program, the overall GPA must be at least 2.0 in order to graduate from a program.

EVALUATION CRITERIA

Certificate courses:

Depending upon the course in which they are enrolled, students either complete tests after units or modules within each course or at the end of the course. These grades are then combined to give a weighted average for the final grade. The assessments are graded as students complete them throughout their program.

Students may be given course extensions to allow for additional time to complete their training depending upon their individual circumstances. For military/corporate students or other students funded through particular agencies, the school follows each branch of service/company’s/agency’s policy regarding course extensions. Students who request extensions should be aware that an extension may have an effect upon their funding based on their employer/funding agency/military branch of service’s policies. It is recommended that all students requesting extensions contact their funding source first to determine the effect an extension may have upon their tuition funding.

In order to graduate from a program, a student must have completed the program requirements with a minimum CGPA of 2.0. A Certificate of Completion is awarded to all students who meet the graduation requirements for the certificate programs.

Degree programs:

Evaluation criteria vary based upon the course. Students should refer to the course syllabus for evaluation criteria for each course. Sample criteria are:*

Final Exam = 30%

Assignments = 30%

Tests/Quizzes = 30%

Participation in chat/class discussions = 10%

*Students should check course syllabus for exact course grade breakdown as some may vary.

In order to graduate from a degree program, students must have earned the required number of credits with a minimum GPA of 2.0. Graduates of a degree program will receive an Associate of Science in Business Administration, an Associate of Science in Healthcare Administration, or an Associate of Science in Integrated Technologies.

Satisfactory Academic Progress Policy

Martinsburg College expects all students to maintain satisfactory academic progress (SAP) toward completion of their enrolled program. At the end of each enrollment period, the grade-point average and rate of completion are calculated to determine academic standings.

SAP has two components students must meet in order to remain in good academic standing:

- **Grade Point Average** – This **qualitative** standard requires undergraduate students to achieve and maintain a cumulative GPA (CGPA) of 2.0.

- **Completion Rate (or Pace)** – This **quantitative** standard requires students to complete at least 67% (minimum pace) of all attempted programs. Also called “pace”, this is a student’s earned (completed) hours divided by his/her total attempted hours. For example, 14 credits earned/18 attempted credits = 77.7%, 9 credits earned/12 credits attempted = 75%

Students not meeting SAP will be placed on academic probation for a maximum of one enrollment period.

Students may repeat courses if necessary. Upon completion of a course repeat, the most recent course grade will be assigned.

Students enrolled in degree programs must show regular progress toward completion of their degree requirements. Students not showing any academic progress for a period of one year are subject to dismissal from the program.

If a student is dismissed due to his/her inability to meet required GPA or complete all required coursework, or for any other reason, the student may apply for re-admission after a period of three months from the date of dismissal unless the student can demonstrate extenuating circumstances.

Students may access their progress records electronically at any time via the online classroom. Additionally, students may contact the student services department to request a copy of their progress records including transcripts.

Students funded through the Veterans Administration

Students utilizing Veterans benefits typically enroll in no more than two courses consecutively over a period of eight weeks. This is the period that is certified for VA-funded students. At the completion of the eight-week period, a progress evaluation is conducted. If students are making SAP, they may continue in their program and enroll in the next two courses. If the student is not making SAP, the student is placed on academic probation for a period of one month and the VA is informed. Students must meet the academic probationary requirements and meet SAP before they can continue in their program. Students will only be certified for a maximum of two courses over an 8-week period.

At the scheduled program completion date, if the student is issued with an Incomplete grade, s/he will have up to six months to replace the “I” grade. Failure to meet this requirement will result in the Incomplete grade being changed to a grade of F and reported to the VA.

Satisfactory Academic Progress Policy for Students utilizing Federal Student Aid (FSA)

To be eligible for FSA funds, a student must make satisfactory academic progress and proceed through the program at an acceptable pace in order to maintain eligibility. Martinsburg College’s Satisfactory Academic Progress (SAP) policy measures progress on a qualitative and quantitative basis. The institution will evaluate a Title IV financial aid

recipient’s academic progress at the end of each payment period. Any student who is failing to achieve SAP standards will be notified in writing. The chart below provides the minimum quantitative and qualitative requirements:

Satisfactory Academic Progress Level	Total Credits Attempted (inc. transfer credits*) in the payment period	Minimum Cumulative Credits Completed	Minimum CGPA Required for Financial Aid
Certificate Programs	0 - 12	67%	2.0
Associate Degree Programs	0 - 12	67%	2.0

*Credits transferred in from another institution are included in the above calculation but transfer credits do not affect the student’s GPA calculation.

A grade of Incomplete (I) is not included in the GPA but is considered towards a student’s non-completion of attempted coursework until the grade is replaced with a permanent grade and the progress can be re-evaluated. It is the responsibility of the student to submit the required coursework within forty-five (45) days of being issued a grade of Incomplete. Failure to meet this requirement will result in the Incomplete grade being changed to a grade of F.

A course withdrawal (W) is not included in the GPA but is considered towards a student’s non-completion of attempted course work.

A failing (F) grade is treated as attempted credits that were not earned and are included in both the qualitative and quantitative calculations.

Maximum Timeframe for Completion

All students who receive federal financial aid are required to complete their programs of study within 150% of the published length of the program. The following maximum timeframes apply to each program offered by Martinsburg College:

 **Certificate programs**

Published length in Credits	Maximum Period must not exceed:
18	27
21	31.5
24	36
30	45
42	63

 **Associate degrees** – the published length is 60 credits. The maximum period must not exceed 90 total semester credits attempted.

Course Repeat Policy

Students receiving Title IV federal financial aid may repeat a course. Credits from both

course attempts will be counted in total semester credits attempted and in minimum cumulative credits completed at Martinsburg College, but only the highest grade received will be included in the calculation of minimum cumulative GPA. Credits from both course attempts will also count toward the maximum timeframe for completion.

All periods of a student's enrollment count when assessing progress, even periods in which a student did not receive FSA funds.

Academic Progress & Financial Aid Warning and Probation

The first occurrence of a student not meeting SAP requirements will result in the student being placed on an academic progress and financial aid warning. This warning will be emailed to the student. The student will have one additional evaluation period to correct the deficiency and meet the minimum requirements at the next evaluation point. Students placed on Academic Progress and Financial Aid Warning will be required to have a counseling session with an instructor and/or student advisor to develop a plan in order for the student to improve his/her performance. The warning period lasts for one payment period only during which time students may continue to receive FSA funds. Students who fail to make satisfactory progress after the warning period will lose their aid eligibility unless they successfully appeal and are placed on probation. Appeals may be submitted on the basis of injury or illness, the death of a relative, or other special circumstances. The student's appeal must explain why s/he failed to make satisfactory progress and what has changed in his/her situation that will allow him/her to make satisfactory academic progress at the next evaluation. The appeal will be submitted to the Appeals Committee who will make a determination within 10 days. If the Appeals Committee determines that the student should be able to meet the SAP standards by the end of the subsequent payment period, the student may be placed on academic probation for one additional payment period. The probation period lasts for one payment period only. If at the end of this time, the student is not making SAP, the student will be dismissed from the program.

Reinstatement

Students who are disqualified and/or denied Financial Aid from a prior probation period, who at the recommendation of the Financial Aid Office attended the institution without financial aid for one academic year (completing at least 12 credits total per semester) may be eligible for reinstatement and regain eligibility for financial aid. Upon completing such units, students are required to submit a Satisfactory Academic Progress Appeal to the Financial Aid Office and provide in-depth details as to when the student completed the reinstatement requirements. All students who have been academically disqualified are ineligible for Financial Aid and can only regain financial aid eligibility through the appeal process. Students who are reinstated are also required to participate in a Satisfactory Academic Progress Counseling Session with the Director of Student Services as part of the SAP Policy.

Student Identity Verification Policy

Upon registration, students are assigned a unique username and password to use to access the online courses. Students can only enter Martinsburg College's classrooms and submit work through this login. In addition, students enrolled in degree programs are required to take a series of proctored exams throughout the duration of the degree program.

These measures are designed to ensure that the student who earned the credit is the same student who completed the course assignments and assessments.

Proctored Exam Policy

Degree-seeking students are required to take a minimum of four proctored exams during their course of study. Students may request approval for a proctor by submitting the proctor's name and contact information before the exam can be conducted. Some examples of proctors are librarians at an academic or public library, a faculty member or administrator at an accredited local college or university, or a commander of a military unit. Once selected, the proctor must certify that s/he is not related to the student and that there is no relationship between the proctor and the student that will prevent the examination from being properly administered. The proctor must also certify that s/he will check a government-issued photo I.D. to confirm identity of the student prior to starting the examination. Alternatively, Martinsburg College has partnered with ProctorU to facilitate online proctoring. Students may request online proctoring through the student services department. If a student is unable to locate a suitable proctor or utilize the services of ProctorU, s/he may request to have the exam proctored by a school administrator authorized to proctor exams. The student would need to have a webcam and access to Skype software.

All programs at Martinsburg College are offered via distance education and therefore there are no specific attendance requirements. Students, however, must complete coursework on an ongoing basis in order to accomplish course requirements within allowable timeframes.

Student Conduct & Academic Honesty Policy

Students who display unsatisfactory conduct to staff, faculty, or fellow students, will be counseled and risk dismissal from the school.

Academic integrity is a fundamental value upon which educational institutions are built. For learning to thrive, educational institutions cannot tolerate acts of academic dishonesty, such as cheating, misrepresentation, or plagiarism.

Plagiarism constitutes the appropriation of another person's exact words or original thoughts or writing without extending proper credit (using in-text citations and a works cited reference list) to the original source. As such, plagiarism exists as an illegal action—a type of theft that, in the business/ professional world, for example, could result in severe penalties against you. A grade of zero will be given on any assignment which has been plagiarized or when unauthorized resources were used. In addition, the matter will be referred to the school administration for appropriate action.

Martinsburg College expects honesty from students in presenting all of their work. It is expected that all students will adhere to the college policies and procedures. Students are required to submit only coursework and examinations which they have completed without any assistance from other individuals or aides. While communication with other students is encouraged, receiving or sharing any information regarding previous test questions and/or examination materials is strictly prohibited. Violations of these rules can result in dismissal from the program and notification to the student's Commander in the respective branch of service, if applicable.

Policy on Copyrighted Material and Unauthorized Peer-to-Peer file Sharing

Unauthorized distribution of copyrighted material, including unauthorized peer-to-peer file sharing, may subject students to civil and criminal liabilities.

Any distribution of copyrighted material without proper licensing or permission from the owner/author/software manufacturer is prohibited by law and may subject students to civil and criminal liabilities. For more information, please review the information on the institution's website at:

<http://martinsburgcollege.edu/wp-content/uploads/2016/03/Copyright-Infringement-and-Peer-to-Peer-File-Sharing.pdf>

Summary of Civil and Criminal Penalties for Violation of Federal Copyright Laws

Copyright infringement is the act of exercising, without permission or legal authority, one or more of the exclusive rights granted to the copyright owner under section 106 of the Copyright Act (Title 17 of the United States Code). These rights include the right to reproduce or distribute a copyrighted work. In the file-sharing context, downloading or uploading substantial parts of a copyrighted work without authority constitutes an infringement.

Penalties for copyright infringement include civil and criminal penalties. In general, anyone found liable for civil copyright infringement may be ordered to pay either actual damages or "statutory" damages affixed at not less than \$750 and not more than \$30,000 per work infringed. For "willful" infringement, a court may award up to \$150,000 per work infringed. A court can, in its discretion, also assess costs and attorneys' fees. For details, see Title 17, United States Code, Sections 504, 505.

Willful copyright infringement can also result in criminal penalties, including imprisonment of up to five years and fines of up to \$250,000 per offense.

For more information, please visit the U.S. Copyright Office website, especially the FAQs section at <http://www.copyright.gov/>

Peer-to-Peer (P2P) file sharing programs were developed to allow distribution and/or shared access to digitally stored information, such as computer programs, multimedia (music and video), documents, and/or electronic books. Examples of P2P file sharing programs include, but are not limited to, BitTorrent, Limewire, Kazaa, Gnutella, and Morpheus.

P2P file sharing programs are not necessarily illegal unless they aid in violating copyright laws by sharing copyright-protected files without authorization by the copyright owners. Most commercially produced music and movies are copyrighted and cannot be freely shared. Using P2P file sharing software to distribute copyrighted materials without the permission of the copyright holder is illegal violates U.S. copyright laws. Students who engage in illegal downloading and/or unauthorized distribution of copyrighted materials

while logged into the institutional classrooms will be subject to dismissal.

Release of Academic Information

Under the provisions of the federal law known as the Family Education Rights and Privacy Act of 1974 (FERPA), eligible students, or where applicable, the parents of students, are afforded certain rights pertaining to school records and personally identifiable information on file with the institution. An eligible student is defined as any person who is currently enrolled or has been enrolled in the institution's programs. It is the policy of the institution to treat all student information, both personal and academic, as strictly confidential. Student information will only be released to a third-party after appropriate written permission has been obtained from the student. There are exceptions to this requirement that are detailed in the FERPA information found in the Consumer Information section of the website. Please click here for further information <http://martinsburgcollege.edu/consumer-information/privacy-student-records-family-educational-rights-privacy-act-ferpa/>

Leave of Absence Policy

If a student finds it necessary to interrupt active study in the program, he or she may request a Leave of Absence for a specific period of time, generally limited to one year. Leave of Absence Requests can be obtained through the Student Services Department. A student who discontinues active enrollment without being granted a Leave of Absence or a student who fails to return to active study at the close of the period of approved leave must reapply for admission.

Progress Records

Students may access their progress records at any time via the online classroom. In addition, they may request an unofficial or official transcript by submitting a transcript request via the website.

CANCELLATION AND REFUND POLICIES

Cancellation Policy

All students have five (5) calendar days after signing an enrollment agreement to cancel enrollment in any manner and receive a full refund of all monies paid to the institution. In addition, students enrolled in the Medical Assisting program may cancel their enrollment up to the completion of the first course in the program and receive a full refund of all monies paid to the institution.

A student requesting cancellation more than five calendar days after signing an enrollment agreement, but prior to beginning a course or program, is entitled to a refund of all monies paid minus a one-time administrative fee per program of no more than 20 percent of the tuition and not to exceed more than \$200.

Refund Policy – Undergraduate Programs

When a student cancels after completing at least one assignment but less than 50 percent of the graded assignments, the institution may retain the administrative fee of no more than 20 percent of the tuition, not to exceed \$200, plus a percentage of tuition paid by the

student in accordance with the following schedule:

Percentage Completed by the Student	Percentage of Tuition Returned to the Student (or Third-Party Funding Agency) Minus the Administrative Fee	Percentage of Tuition Retained by the Institution
Up to 10 %	90%	10%
>10% - 25%	75%	25%
>25% - 50%	50%	50%
>50% - 100%	0%	100%

Sample Refund Calculation:

Total Number of Graded Assignments = 10

For students who complete 1 out of the 10 graded assignments: $1/10 = 10\%$ Tuition = $\$3996 - \200 administrative fee = $\$3796 \times 10\% = \$379.60 + \$200 =$ administrative fee = $\$579.60$. Total retained by the institution = $\$579.60$. Total returned = $\$3416.40$.

For students who complete 2 out of the 10 graded assignments: $2/10 = 20\%$ Tuition = $\$3996 - \200 administrative fee = $\$3796 \times 25\% = \$949 + \$200$ administrative fee = $\$1149$. Total retained by the institution = $\$1149$. Total returned = $\$2847$

For students who complete 5 out of the 10 graded assignments: $5/10 = 50\%$ Tuition = $\$3996 - \200 administrative fee = $\$3796 \times 50\% = \$1898 + \$200$ administrative fee = $\$2098$. Total retained by the institution = $\$2098$. Total returned = $\$1898$.

For students who complete 8 out of the 10 graded assignments: $8/10 = 80\%$ Tuition = $\$3996 - \200 administrative fee = $\$3796 \times 100\% = \$3796 + \$200$ administrative fee = $\$3996$. Total retained by the institution = $\$3996$. Total returned = $\$0$

Any money due to a student will be made within 20 days after receipt of a written notification of withdrawal or within 30 days of a cancellation or withdrawal request made in any manner. If no notification of termination is received by the school, any money due to a student will be refunded within thirty (30) days of the date of determination that the student has withdrawn from the program.

Students have the right to withdraw from the program at any time. However, the refund period ends in conjunction with the initial enrollment termination date which is 1.5 times the scheduled enrollment period. If students do not complete their program within the time allotted prior to the termination date of the enrollment agreement, no refund will be issued.

The refund policy is based on a course-by-course basis for students enrolled in a degree program.

Refund Policy – Graduate Programs

Graduate Certificate in Applied Behavior Analysis

The following refund policies apply based on whether the student is enrolled in the 8-week course schedule or 16-week course schedule:

8-week Course Schedule

Percentage of Tuition Returned to the Student Minus the Application and/or Registration Fee AFTER:

1 st week	80%
2 nd week	60%
3 rd week	40%
4 th week	20%
5 th week	0%

16-week Course Schedule

Percentage of Tuition Returned to the Student Minus the Application and/or Registration Fee AFTER:

1 st week	80%
2 nd week	70%
3 rd week	60%
4 th week	50%
5 th week	40%
6 th week	30%
7 th week	20%
8 th week	10%
9 th week	0%

Military Tuition Assistance (TA) Return of TA Funds Policy

The following policy applies for students using funding from the Department of Defense Military Tuition Assistance (TA) program:

Any TA Program funds will be returned directly to the Military Service and not the Service member.

Up to the start date of the program all (100%) of the TA Funds will be returned to the Military Service if the Service member does not begin attendance at the institution or start a course regardless of whether the student starts other courses.

In the event that a course is canceled by the institution, any TA funds received by the institution for students enrolled in the course, will be returned to the Military Service.

Any unearned TA funds will be returned to the Military Service on a proportional basis through at least the 60 percent portion of the period for which the funds were provided. In instances when a Military Service member is unable to continue in his/her program due to a military service obligation, the college will work with the affected Service member to ensure that there is not a student debt for the returned portion.

Program Withdrawal

Students wishing to withdraw from their program may contact the institution in any manner. While not required, the institution recommends that students follow the procedures outlined below when withdrawing from their program.

Please contact Lori Charbonnier in the Student Services Department. This can be done in any manner including by telephone at (304) 607-4039, by email at lcharbonnier@martinsburgcollege.edu and put "Program Withdrawal" in the subject line, by

fax at 866-475-9533, or in writing to:
Lori Charbonnier Student Services Dept.
Martinsburg College 341 Aikens Center
Martinsburg, WV 25404

Students must clearly state the effective date of withdrawal, which must be on or after the date of notification, and the reason for withdrawal. While students may contact the school in any manner in order to withdraw from a program, it is the students' responsibility to ensure that the school has been properly notified of their intention to withdraw.

If a student's company or branch of service participates in a tuition assistance plan, once approved, Martinsburg College will invoice the company/ branch of service for tuition payment. In order for this to occur, the school must have written authorization from the company/branch of service indicating that they will pay the student's tuition costs at the time of enrollment.

Martinsburg College will also invoice other agencies directly for tuition payments that have been approved for students, prior to them starting a program at the school. The student or his/her agency representative will need to provide documentation indicating the agency's responsibility for tuition.

Student Identity Verification Procedures

Martinsburg College verifies the identity of the students who are completing its courses and programs. Students must access their courses through the secure online class portal, where they must enter their unique username and password. Martinsburg College implements the following procedures to ensure student identity:

1. Students who are enrolled in an online course must always be required to enter their user ID and a password to access their online course.
2. Students on degree programs are required to take several proctored examinations throughout the course of their program.

Career Services

Although Martinsburg College does not provide direct placement services, each graduate is provided access to a Post-Graduation Career Services Plan upon completion of their program. This plan is available to students online and includes resume templates, interview skills, specific career-related information, job search strategies, and more. In addition, we also provide a virtual Career Center with a career development portal offering a host of resources necessary to guide students through the strategic job search process and achieve their career goals. Users can create a personalized career plan and conduct a focused career search in an easy-to-use, online portal. Students can create resumes, cover letters, and conduct a results-oriented career search in an easy-to-use, interactive platform.

Post-Graduation Plan/Career Services

The plan includes the following information provided to students in an online classroom format:

- Career Development Resources
- Certification Test preparation
- Career Planning and Job Search Preparation (Resume and Cover Letter Templates provided)

- Getting the Job (with Videos, Podcasts, and articles relating to Career Development, Resumes, Cover Letters, Career Portfolios, Job Search, Networking, Career/Job Fairs, Interviewing, Volunteer/Internships and Personal Branding)

Student Grievance/Complaint Procedure

Martinsburg College is committed to providing a learning environment that promotes student success and achievement. If students are not satisfied with any aspect of their program or the institution, they may contact the Student Services department at (304) 263-6262 ext. 2 or by email at support@martinsburgcollege.edu

Most issues can be resolved quickly once the institution is aware of the student's concern. Martinsburg College is committed to resolving students' concerns and issues. In the event that the issue is still not resolved after communication with the Student Services department, students may contact Ms. Lori Charbonnier and file a complaint. Complaints can be made in writing, via email or by telephone to Ms. Charbonnier at:

Lori Charbonnier Student Services
Martinsburg College 341 Aikens Center
Martinsburg, WV 25404
Telephone (304) 607-4039
lcharbonnier@martinsburgcollege.edu

The complaint should outline the nature of the complaint and the parties involved.

The written complaint should include:

- 1) Student 's name
- 2) Current address
- 3) Current phone number
- 4) Current email address
- 5) A description of the complaint including pertinent details of any previous conversations with school personnel
- 6) Copy of any documents necessary for full understanding of the complaint
- 7) Expectation for how the complaint should be resolved.

Ms. Charbonnier will contact the student directly within 72 hours of receipt of a complaint. If the complaint is unable to be resolved by Ms. Charbonnier, the complaint will be forwarded to the Chief Academic Officer & Director of Operations. The Chief Academic Officer & Director of Operations will conduct an investigation into the complaint and will respond in writing within 10 business days of its receipt. If the complaint concerns a faculty member or administrator, the institution will allow the faculty member or administrator 10 business days to respond to the complaint. The student will be informed of this timeframe. The institution will make a final decision after receiving the responses from all involved parties. If, after following these procedures, a student still feels that his/her complaint has not been addressed satisfactorily, s/he may contact the West Virginia Council for Community and Technical College Education, 1018 Kanawha Blvd. East, Suite 700, Charleston, WV 25301 (304) 558-0265 or The Distance Education Accrediting Commission, 1101 17th Street, N.W., Suite 808, Washington, D.C. 20036 (202) 234-5100.
